## 1.0 INTRODUCTION

---

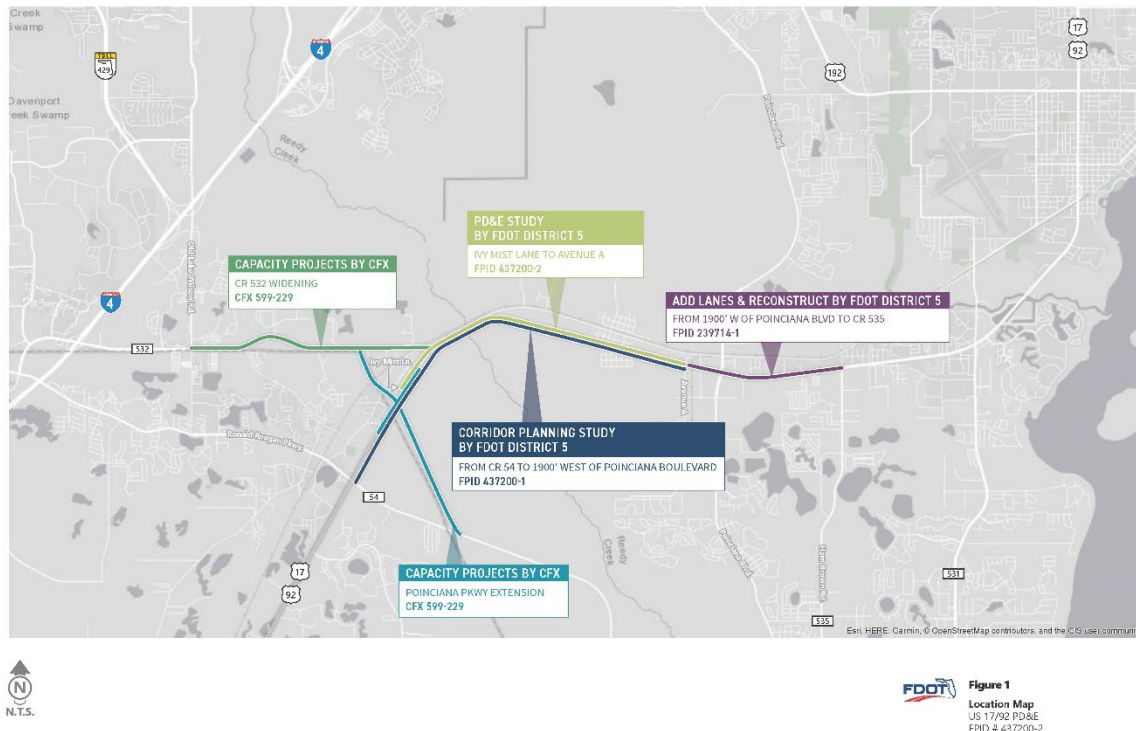

The Florida Department of Transportation (FDOT) District 5 is conducting a Project Development and Environment (PD&E) Study to evaluate alternatives to widen US 17/92 from the existing two-lane roadway to a four-lane divided roadway from Ivy Mist Lane to Avenue A, a distance of 3.8 miles, in Osceola County. A prior Corridor Planning Study of US 17/92 from County Road (CR) 54 (Ronald Reagan Parkway) in Polk County to 1,900 feet west of Poinciana Boulevard at Avenue A in Osceola County was completed in 2018. This project traverses through the community of Poinciana, and the unincorporated community of Intercession City. **Figure 1** shows the US 17/92 PD&E Study limits (shown in light green) and previous Corridor Planning Study limits (shown in blue), along with the limits of adjacent projects mentioned below.

Two related projects overlap the western end of this PD&E Study:

- The segment of US 17/92 from west of Parker Road in Polk County to Ivy Mist Lane in Osceola County is included in the Central Florida Expressway Authority's (CFX) State Road (SR) 538/Poinciana Parkway Extension to CR 532 project, which is under design and anticipated to be complete in late 2022 with construction beginning in mid-2023. The SR 538/Poinciana Parkway Extension project will include the widening of US 17/92 within these limits, as well as a proposed diverging diamond interchange with US 17/92 southwest of Ivy Mist Lane as shown in teal (**Figure 1**).
- Adjacent to the western end of the PD&E Study (shown in dark green) is a CFX study evaluating widening CR 532/Osceola Polk Line Road from two to four lanes from Old Lake Wilson Road to US 17/92 (**Figure 1**). This study includes design and is anticipated to begin construction in 2024.

At the eastern limits of this PD&E Study, FDOT District 5 recently completed the widening of US 17/92 from two to four lanes, for the limits from 1,900 feet west of Poinciana Boulevard (Avenue A) to CR 535 (Ham Brown Road) in Kissimmee (FPID: 239714-1). The project, completed in 2022, is shown in purple on **Figure 1**.

**Figure 1: US 17/92 PD&E Study Location Map**

## 2.0 PROJECT SUMMARY

### 2.1 Project Description

Geotechnical and Environmental Consultants, Inc. (GEC) was retained by Stantec Consulting Services, Inc. (Stantec) on behalf of FDOT to provide a Contamination Screening Evaluation Report (CSER) for the US 17/92 from Ivy Mist Lane to Avenue A Widening project. This CSER was performed as part of Financial Project ID No. 437200-2-22-01.

### 2.2 Purpose and Need

The purpose of this project is to provide needed capacity through the design year 2045, enhance regional connectivity, and improve safety conditions along the study corridor. The project is needed to meet future traffic demand, provide satisfactory future traffic operations, improve corridor access management, and improve safety along the corridor.

The following sections describe the need for improvements based on transportation connectivity, future traffic demand, and existing crash data.

### 2.3 Transportation Connectivity

The US 17/92 study corridor is a vital east-west segment in the regional transportation network within western Osceola County and the primary thoroughfare through Intercession City.

Regionally, the US 17/92 corridor serves as a major arterial connecting Kissimmee to the north and Polk County to the south. The study corridor will connect to the programmed SR 538/Poinciana Parkway Extension at the western end of the project, which will include an interchange connection to US 17/92 immediately southwest of Ivy Mist Lane. The SR 538/Poinciana Parkway Extension is planned to extend to I-4 in the vicinity of the SR 429 interchange providing enhanced connectivity from US 17/92 to Osceola and Orange Counties. This project would provide a continuous four-lane section between the Poinciana Parkway Extension and Avenue A. The programmed widening of CR 532 from US 17/92 to Lake Wilson Road will complete a continuous four-lane connection to I-4. The corridor is a designated evacuation route by the Florida Division of Emergency Management (DEM).

## **2.4 Future Traffic Demand**

Future traffic analyses were conducted for the US 17/92 study corridor for three analysis years (2025, 2035, and 2045). Based on the intersection operational analysis, by 2045 most of the study intersections are anticipated to experience very high delays. Specifically, the high delays start from 2025 for the majority of unsignalized intersections and the signalized intersection at US 17/92 and CR 532. Capacity improvements are needed to accommodate future traffic demand and provide satisfactory traffic operations.

Based on the arterial operational analysis, the US 17/92 study corridor is expected to operate at target Level of Service (LOS) D or better through the design year 2045, except for the northbound/eastbound approach south of CR 532, which is expected to fail in the 2035 and 2045 AM design hour. These results are due to the lack of signalized intersections between CR 532 and Poinciana Boulevard and the existing high posted speed limit. However, the signalized intersection at CR 532 is expected to experience very high approach delays and extensive queueing along US 17/92, which will impact the arterial operations. Additionally, all of the future Average Annual Daily Traffic (AADT) along the study corridor will exceed the Maximum Service Volume of 18,590 for LOS D for a two-lane urbanized arterial starting in opening year 2025.

## **2.5 Safety**

Crash data for a five-year period (2014-2018) obtained from FDOT Crash Analysis Reporting System (CARS) found a total of 161 crashes occurred along the study corridor. Of the 161 reported crashes, 91 involved injuries and two resulted in fatalities. The highest portion of crashes were rear-end (62.1%). The crash rates at the Shepherd Lane/Nocatee Street intersection and at the Avenue A intersection were found to be above the statewide crash rate. The crash rate at the CR 532 (Osceola Polk Line Road) intersection was not higher than the statewide crash rate but very close. This project intends to increase capacity and improve access management, which is anticipated to reduce congestion and conflict points. This project will also provide pedestrian and bicycle facilities to improve multimodal accommodations throughout the study corridor.

# **3.0 PROJECT ALTERNATIVES**

---

## **3.1 No-Build Alternative**

The No-Build Alternative assumes no improvements such as additional traffic lanes or other improvements will be made within the study area, except for programmed improvements to nearby or adjacent facilities. For this project, the No-Build Alternative includes the recently

completed widening of US 17/92 from Avenue A to CR 535 (FPID: 239714-1) to four lanes, the programmed SR 538/Poinciana Parkway Extension, and the CR 532 widening.

The No-Build Alternative serves as the baseline for comparing the Build Alternative and remains a viable option throughout the PD&E study process. Based on programmed improvements, the existing typical section assumed for the No-Build Alternative remains a two-lane undivided rural typical section. At the eastern end of the project at Avenue A, the corridor transitions to a four-lane typical section. For the majority of the study limits, the existing typical section along US 17/92 within the study limits is provided below in **Figure 2**. The existing bridge typical section is provided as **Figure 3**.

**Figure 2: Existing Typical Section**

**Figure 3: Existing Bridge Typical Section**

### 3.2 Alternatives Considered

The Build Alternative widens US 17/92 to four lanes (two lanes per direction) throughout the study limits from Ivy Mist Lane to Avenue A. Due to alignment constraints from adjacent facilities and the existing bridge over Reedy Creek, the Build Alternative applied from Ivy Mist Lane to east of Old Tampa Highway is a best-fit alignment. From east of Old Tampa Highway to Avenue A, the study developed three alignments for alternatives comparison. The recommended alignment

maximizes the existing right-of-way (ROW) and consists of widening to the south on the west end of the project corridor to align with the Poinciana Parkway Extension proposed improvements, then shifts to the south through the central portion of the project corridor to avoid the existing cemetery, widens to the north through Intercession City to avoid relocations, and aligns with the adjacent widening at the east end of the project corridor. The Preliminary Engineering Report (PER) prepared for the study summarizes the alternatives considered, the related analysis, and selection of the Preferred Alternative. The Preferred Alternative was developed to avoid and minimize environmental effects where feasible. Several stormwater treatment pond alternatives were evaluated, and the Pond Siting Report (PSR) discusses these alternatives and selection of the preferred pond sites.

### 3.3 Description of Preferred Alternative

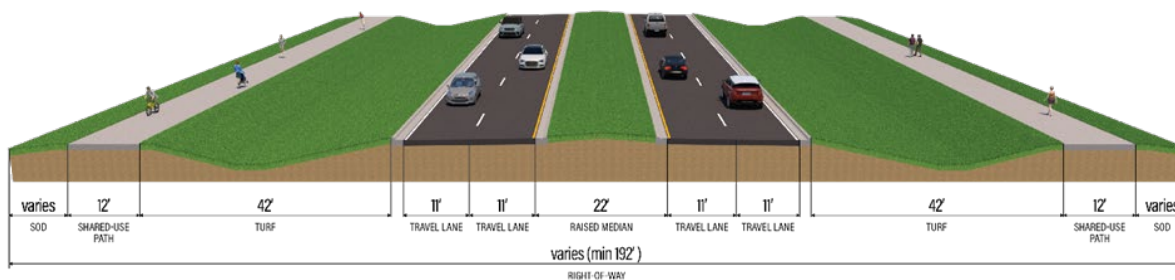

The Preferred Alternative consists of four typical sections throughout the US 17/92 study corridor.

The first typical section exists in three separate roadway segments along the US 17/92 study corridor, which are described below:

- Just east of Ivy Mist Lane (beginning of study area) to Reedy Creek Bridge
- Just east of Old Tampa Highway to just west of Suwannee Avenue
- From Nocatee Street/Shepherd Lane to Avenue A (end of study area)

Illustrated in **Figure 4**, this typical section consists of a four-lane urban design with a 22-foot raised median, 11-foot travel lanes, Type E curb and gutter along the inside travel lanes, Type F curb and gutter along the outside travel lanes, and a 12-foot shared-use path along the north and south sides of the roadway. The shared-use paths are separated from the roadway by drainage swales. The design speed and posted speed for this typical section is 45 mph, and ties into the 30 mph posted speed in the Intercession City typical section using speed curves, which are further described below in the Special Features chapter of this report. The segment from just east of Ivy Mist Lane to Reedy Creek bridge ties into both the adjacent Poinciana Parkway Extension (Project #538-235) and the adjacent widening of CR 532 (Project #538-235A).

**Figure 4: US 17/92 Suburban Typical Section**

Illustrated in **Figure 5**, the preferred typical section for the new bridge over Reedy Creek will utilize the existing bridge for eastbound traffic, and construct a new bridge for westbound traffic, with a 70-foot median separating the two bridges. The existing bridge to be used for eastbound traffic will have two 11-foot lanes, with an 11-foot inside and outside shoulder. Meanwhile, the new bridge to be used for westbound traffic will have two 11-foot lanes, a 6-foot inside shoulder, a 10-foot outside shoulder, and a 12-foot shared-use path, separated from the travel lanes by a traffic barrier. The 12-foot shared-use path on the south side of the roadway that exists throughout the rest of the project will not be a component of this typical section due to the existing bridge not

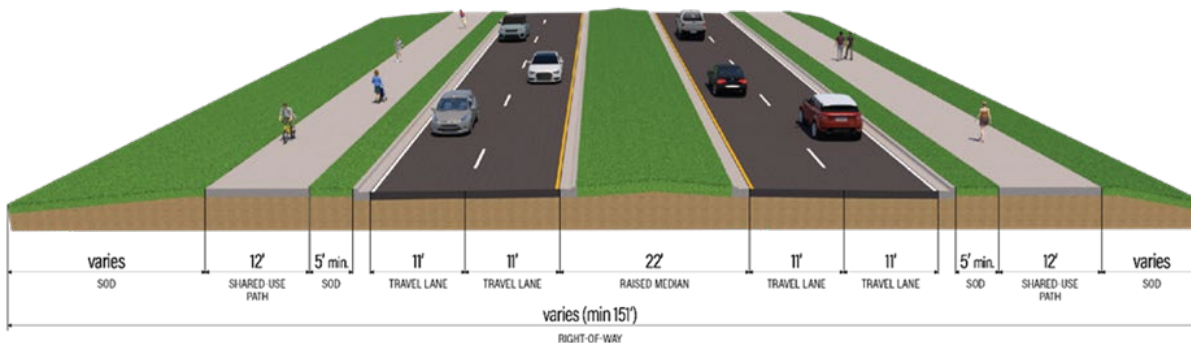

having enough width to fit the shared-use path. Pedestrians will use a crosswalk at the Old Tampa Highway and CR 532 intersection to cross the roadway to use the shared-used path on the north side of the roadway. The design speed and posted speed for this typical section is 45 mph.

**Figure 5: Reedy Creek Bridge Typical Section**

Illustrated in **Figure 6**, the preferred typical section for the segment of the project just east of the Reedy Creek bridges is an urban typical section with two 11-foot travel lanes in each direction separated by a 22-foot median, Type E curb and gutter along the inside travel lanes, Type F curb and gutter along the outside travel lanes, and a 12-foot shared-used path along the north and south sides of the roadway. Unlike the first typical section, there are no drainage swales separating the shared-used paths from the roadway. The shared-use paths are separated by the back of curb by a 5-foot utility strip. The lack of drainage swales in this section is to minimize the amount of proposed ROW. The design speed and posted speed for this typical section is 45 mph.

**Figure 6: Old Tampa Highway Intersection Typical Section**

Illustrated in **Figure 7**, the preferred typical section for the segment of the project in Intercession City is an urban typical section with two 11-foot travel lanes in each direction separated by a 15.5-foot median, Type E curb and gutter along the inside travel lanes, Type F curb and gutter along the outside travel lanes, and a 10-foot urban side path on both sides of the roadway. Similar to the previous typical section, there are no drainage swales in order to minimize ROW acquisition. The urban side path on the north side of the roadway is separated from the back of curb by a 2.5-foot utility strip, while the urban side path on the south side of the roadway is separated from the

back of curb by a 2-foot utility strip. The design speed and posted speed for this typical section is 30 mph.

**Figure 7: Intercession City Typical Section**

## 4.0 PROJECT DESCRIPTION

The following sections describe the current study area conditions, the project construction plans and elements of the project that could be impacted by soil or groundwater contamination. Common terms used in this report can be found in **Appendix D**.

### 4.1 Site Description

The project site is located along US 17/92 (SR 600) from Ivy Mist Lane to Avenue A. The project alignment is shown on an excerpt of the U.S. Geological Survey (USGS) Kissimmee, Intercession City, and Davenport, Florida Quadrangle maps (**Figure A1**) in **Appendix A**.

Within the project limits, the project plans include the addition of mast arm signal poles, pedestrian signal poles, and various drainage improvements along the intersection.

### 4.2 Current Land Use

The current land uses within the study area are shown on the St. Johns River Water Management District (SJRWMD) Map on **Figure A2** in **Appendix A** and are summarized as follows:

**Table 1: SJRWMD Current Land Uses**

Fixed Single Family Units	Oak – Cabbage Palm Forest
Mobile Home Units	Melaleuca
Rural Residential	Reservoirs
Mixed Units	Mixed Wetland Hardwoods
Commercial and Services	Mixed Shrubs
Other Light Industry	Cypress
Institutional	Cypress – Mixed Hardwoods
Improved Pastures	Wetland Forested Mixed

Herbaceous  
Shrub and Brushland  
Upland Hardwood Forest  
Palmetto Prairies

Freshwater Marshes  
Transportation  
Bus and Truck Terminals

### 4.3 Project Description

Based on our review of the project plans, roadway improvements include the following:

- Realignment of the US 17/92 roadway
- Stormwater ponds
- Bridge construction
- Pavement and driveway removal
- Midblock pedestrian crossings
- Roundabout construction
- Various drainage improvements

### 4.4 Potential Contamination Impacts

The project elements that could be impacted by soil and/or groundwater contamination include the following:

- Soil excavation for light and pedestrian signal pole foundations
- Soil excavation for drainage improvements
- Soil excavation for stormwater ponds
- Soil excavation for roadway construction

## 5.0 CONTAMINATION SCREENING METHODOLOGY

---

GEC conducted this evaluation in general accordance with Chapter 20 of the FDOT PD&E Manual dated July 1, 2023. The study area is defined by the following distances from the right-of-way:

- All sites within 500 feet
- Non-landfill solid waste sites within 1,000 feet
- Solid waste landfills, CERCLA, or National Priorities List (NPL) sites within ½ mile

GEC reviewed relevant information from the Florida Department of Environmental Protection (FDEP) United States Environmental Protection Agency (USEPA), and local agencies in Osceola County to identify known or potential contamination sites within the study area. Historical aerial photographs and other published historical sources were reviewed as part of this CSER. GEC performed a site reconnaissance of the properties within the study area and attempted to interview individuals with knowledge of the study area's environmental status.

Based on the results of the contamination screening activities, GEC assigned Risk Ratings to sites. The risk rating system was developed by FDOT and incorporates four levels of risk: **No**, **Low**, **Medium** and **High**. For a description of the four risk levels please refer to **Appendix E**.

## 6.0 GEOLOGIC AND GEOGRAPHIC CONDITIONS

### 6.1 Central Florida Geology

**Figure 8: Karst Geology**

Due to its prevalent geology, referred to as karst, Central Florida is prone to the formation of sinkholes, or large, circular depressions created by local subsidence of the ground surface. The nature and relationship of the three sedimentary layers typical of Central Florida geology cause sinkholes. The deepest, or basement, layer is a massive cavernous limestone formation known as the Floridan aquifer.

**Figure 9: Aquifer Systems**

The Floridan aquifer limestone is overlain by a silty or clayey sand, clay, phosphate, and limestone aquitard (or flow-retarding layer) ranging in thickness from nearly absent to greater than 100 feet and locally referred to as the Hawthorn Group (Hawthorn). The Hawthorn is in turn overlain by a 40- to 70-foot-thick surficial layer of sand, bearing the water table aquifer. The likelihood of sinkhole occurrence at a given site within the region is determined by the relationship among these three layers, specifically by the water (and soil)-transmitting capacity of the Hawthorn at that location.

The water table aquifer is comprised of Recent and Pleistocene sands and is separated from the Eocene limestone of the Floridan aquifer by the Miocene sands, clays and limestone of the Hawthorn. Since the thickness and consistency of the Hawthorn is variable across Central Florida, the likelihood of groundwater flow from the upper to the lower aquifer (known as aquifer recharge) will also vary by geographical location.

**Figure 10: Sinkhole Formation Mechanism**

In areas where the Hawthorn is absent, water table groundwater (and associated sands) can flow downward to cavities within the limestone aquifer, like sand through an hourglass, recharging the Floridan aquifer, and sometimes causing the formation of surface sinkholes. This process of subsurface erosion associated with recharging the Floridan aquifer is known as raveling. Thus, in Central Florida, areas of effective groundwater recharge to the Floridan aquifer have a higher potential for the formation of surface sinkholes.

Based on the USGS Map entitled "Recharge and Discharge Areas of the Floridan Aquifer in the St. Johns River Water Management District and Vicinity, Florida," 1984, the study area lies in an area of generally no recharge; therefore, we can conclude based solely on this data that it also lies in an area where the relative risk of sinkhole formation is generally low to moderate compared to the overall risk across Central Florida.

### 6.2 USGS Quadrangle Map

The study area has been transposed onto the USGS Davenport, Intercession City, and Kissimmee, Florida Quadrangle maps for this area, as shown on **Figure A1** in **Appendix A**. According to the quadrangle map, the natural ground surface elevation in the study area ranges

from about +65 feet in the eastern portion to +75 feet National Geodetic Vertical Datum (NGVD) in the western portion.

Historical citrus groves are visible at the south end of the alignment, within the roadway and **Joint Use Pond 1**.

A railroad crosses US 17/92 adjacent to the north end of the alignment, between Avenue A and Avenue B.

No landfills, borrow pits, quarries, or other conditions are depicted that would represent potential contamination concerns on, or in the immediate vicinity of, the study area.

### 6.3 NRCS Soil Survey Review

The Natural Resources Conservation Service (NRCS) Soil Survey of Osceola County, Florida was reviewed for information regarding near-surface soil conditions within the project limits, as shown on **Figure A3** in **Appendix A**. The following soil types were identified within the study area:

**Table 2: NRCS Soil Types**

Unit No.	Soil Name
7	Candler sand, 0 to 5 percent slopes
12	Floridana fine sand, frequently ponded, 0 to 1 percent slopes
15	Hontoon muck, frequently ponded, 0 to 1 percent slopes
16	Immokalee fine sand, 0 to 2 percent slopes
22	Myakka fine sand, 0 to 2 percent slopes
23	Myakka-Urban land complex
25	Nittaw muck
27	Ona fine sand, 0 to 2 percent slopes
29	Parkwood loamy fine sand, occasionally flooded
31	Pits
36	Pompano fine sand, 0 to 2 percent slopes
37	Pompano fine sand, frequently ponded, 0 to 1 percent slopes
38	Riviera fine sand, 0 to 2 percent slopes
39	Riviera fine sand, frequently ponded, 0 to 1 percent slopes
41	Satellite sand, 0 to 2 percent slopes
45	Wabasso fine sand, 0 to 2 percent slopes
99	Water

The NRCS Soil Survey map depicts an area of pits (Soil Unit No. 31) is shown southeast of 17/92 at Ivy Mist Lane. Aerial photographs indicate this area was disturbed property in 1941 and undeveloped wooded land. The area of pits was cleared of trees, and drainage canals were visible around the border between 1996 and 2006.

Other than the area of pits, no other landfills, quarries, or other conditions are depicted that would represent potential contamination concerns on, or in the immediate vicinity of, the study area.

*Information contained in the NRCS Soil Survey is very general and may be outdated.* It may not therefore be reflective of actual soil and groundwater conditions, particularly if recent development in the site vicinity has modified soil conditions or surface/subsurface drainage.

## 7.0 HISTORICAL DATA REVIEW

---

### 7.1 Historical Aerial Photographs

Historical aerial photographs of the study area were reviewed to evaluate past land use and to identify features that may indicate hazardous material or petroleum contamination. Available historical aerial photographs of the study area were obtained from the University of Florida and accessed from Google Earth. Aerial photographs for the following years were reviewed: 1941, 1944, 1951, 1952, 1959, 1969, 1974, 1983, 1993, 1996, 2006, 2012, 2017, and 2021.

- Dating back to 1941, US 17/92 is visible traversing east to west, and the Atlantic Coast Line Railroad is located north of US 17/92. Much of the surrounding area is undeveloped wooded land, a citrus grove is visible south of US 17/92 in the central portion of the study area.
- In 1944, small side streets and some residences are visible in Intercession City. The area has been further developed in 1951, and again in 1969 expanding southward.
- In 1969, citrus groves are located on the east and west side of US 17/92 in the western portion of the study area. A small portion of citrus groves exists within the boundary of **Joint Use Pond 1** through 1983.
- The land for the Duke Energy Intercession City Plant (**Site No. 1**) was cleared in 1974.
- Residences are visible in the western portion of the study area in the 1983 photograph.
- The Leprino Foods (**Site No. 6**) facility is visible in the 1983 photograph. The eastern portion of the SVC Manufacturing facility (**Site No. 7**) is also visible, and has been expanded into the study area in 2006.

**Table B2 in Appendix B** describes the aerial photograph details for the 12 sites assigned Contamination Risk Ratings (CRR). Pertinent details identified in the historical aerial photographs are also included in the Potential Contamination Site Descriptions in **Table B1 in Appendix B**. The historical aerial photographs are provided in **Appendix C**.

### 7.2 City Directories

City directories are historical listings of businesses and residences in a given area, similar to a standard telephone book. The site occupant and addresses listed for previous years can identify past land uses. GEC contracted with Environmental Data Resources (EDR) to provide a city directory review for the study area. EDR researched city directories from 1971 through 2017 at approximately 5-year intervals.

No obvious potential contamination sites were identified by the City Directory Report. The EDR City Directory Report is included in **Appendix F**.

### 7.3 Fire Insurance Maps

Fire insurance maps are used by insurance companies in assessing fire risk. These maps contain details about building construction, business type, building contents, fuel storage tanks, and other factors affecting fire risk.

Sanborn Fire Insurance maps were not available for the study area.

### 7.4 Historical Quadrangle Maps

GEC reviewed historical quadrangle maps at the [www.Historicaerials.com](http://www.Historicaerials.com) website. The maps for 1955, 1965, 1969, 1972, 1981, 1987, 1988, 1991, 2012, 2015, and 2018 were reviewed.

US 17/92 is visible on the 1955 map, with several buildings adjacent to the north and south of the road in the western portion. An area of citrus is shown adjacent to US 17/92 in the eastern portion of the Study Area, in Intercession City. The railroad line is visible to the north of US 17/92. A building is depicted in the approximate area of the current Circle K Gas Station (**Site No. 3**) however its use is not shown. Several buildings are shown in the central portion of the study area.

The "area of pits" from the NRCS Soil Survey is visible. A rectangle is created with the 75-foot contour line on the east side of US 17/92 at the west/south end of the alignment.

Intercession City has been extended north and southward, with additional streets and buildings on the 1972 map. Two tanks, about 4,000,000 gallons in size, from the Duke Energy Intercession City Plant (**Site No. 1**) are visible in 1981. The Leprino Foods (**Site No. 6**) and SVC Manufacturing (**Site No. 7**) buildings are located in the eastern portion of the study area in 1987.

No structures are depicted indicating potential land uses on the 2012 through 2018 maps.

The historical quadrangle maps do not depict landfills, borrow pits, quarries, or other conditions that would represent potential contamination concerns on, or in the immediate vicinity of, the study area.

### 7.5 Historical Contamination Screening Evaluation Report

GEC prepared an Existing Conditions Memorandum for US 17/92 from CR 54 to Avenue A as part of FPID No. 437200-1, dated September 1, 2021. The memorandum identified 12 sites that were assigned CRRs. Nine of these sites fall within the Study Area for this project and are discussed in **Table B1** in **Appendix B**.

No additional historical CSERs were available for the study area.

## 8.0 PUBLIC RECORD REVIEW

---

GEC conducted a review of the public record for the study area including information obtained from the USEPA and the FDEP. As a part of our review, GEC subcontracted with EDR for a regulatory database search. The EDR Radius Map Report is included in **Appendix G**.

## 8.1 Florida Department of Environmental Protection (FDEP) Databases

The FDEP has compiled several databases that are useful in identifying potential sources of hazardous material or petroleum product contamination. The FDEP databases reviewed for this study and their common abbreviations are provided in **Appendix H**.

## 8.2 United States Environmental Protection Agency (USEPA) Databases

The federal government has compiled several databases that are useful in identifying potential sources of hazardous material or petroleum product contamination. The federal databases reviewed for this study and their common abbreviations are provided in **Appendix I**.

## 8.3 FDEP OCULUS Document Management System, Map Direct Website, and Nexus Portal

The FDEP uses the OCULUS Document Management System, Map Direct Website, and Nexus Portal to provide public record information for petroleum or hazardous material releases to the environment, generators of hazardous waste, and solid waste facilities. Information contained in this data management system includes the status of active and abandoned storage tanks, tank inspection reports, tank closure reports, environmental assessment reports, remedial action reports, hazardous waste generator compliance details, and solid waste facility compliance details.

GEC reviewed the OCULUS Document Management System, Map Direct Website, and Nexus Portal within the search distances provided in **Section 5.0**. The results of our review have been incorporated in our Potential Contamination Site Descriptions in **Table B1** in **Appendix B**. The FDEP OCULUS, Map Direct and Nexus Portal Information can be found in **Appendix J**.

## 8.4 EDB Delineated Areas

The Florida Legislature had the FDEP implement the Delineated Areas Program in 1988 under Chapter 62-524, Florida Administrative Code (F.A.C.). The purpose of the program was to protect public health and groundwater resources by regulating potable water well construction and testing standards for areas of known groundwater contamination. During the period 1962 to 1980, the Florida Department of Agriculture and Consumer Services (FDACS) conducted widespread applications of ethylene dibromide (EDB), an agricultural pesticide, to control nematodes in citrus groves. In 1983, the FDEP began testing groundwater in potable wells throughout Florida due to the discovery of EDB in wells in other states. The delineated areas of EDB groundwater contamination are shown on the FDEP Map Direct website. The potable wells, agricultural or residential, with confirmed impacts were shown on the website with a 1,000-foot buffer zone in an attempt to project future migration of contaminants. However, this does not mean that there is not EDB contamination outside of that 1,000-foot zone.

After reviewing these EDB-delineated areas on the FDEP Map Direct website, GEC did not find the Study Area to be located within an EDB-delineation area.

## 8.5 Agricultural Land Use

The study area was historically predominantly undeveloped land with residential and commercial development in the 1950s and 60s. Citrus groves were visible in the 1969 through 1983 aerial photographs. Agricultural land and citrus groves typically have environmental concerns

associated with them. These concerns include pesticide/herbicide storage, mixing, and usage, grove heating during cooler winter months (smudge pots and other grove heating equipment), tractor and equipment maintenance and fueling, underground and aboveground fuel storage tanks, irrigation pumps and maintenance, and asbestos irrigation lines. The historical citrus groves are discussed as **Site No. 11** in **Table B1** in **Appendix B**.

GEC did not identify any cattle pens, farm/ranch buildings, irrigation wells, or water towers in the study area during the historical aerial photograph review or during the site reconnaissance.

## 8.6 Railroad Corridors

The Atlantic Coast Rail Line (**Site No. 10**) crosses US 17/92 just northeast of the study area and also runs east to west, about 280 feet to about 1,000 feet north of US 17/92 along the entire study area. The rail line is depicted through on the 1955 through 2018 topographical maps and all readily available aerial photographs. Existing and historical rail lines have several common chemical constituents of concerns as follows:

- **Arsenic:** The most commonly used arsenic-containing products were herbicides, pesticides, insecticides, and wood-treating agents such as chromated copper arsenate.
- **Creosote:** Creosote is used to coat railroad ties.
- **Polynuclear aromatic hydrocarbons:** Polynuclear aromatic hydrocarbons are a coal tar and creosote by-product. Coal tar is more commonly associated with rail yards.
- Other **inorganic constituents** used in herbicides.

Due to its residual nature, arsenic is the most commonly occurring chemical constituent related to railroad beds, and liberal applications of herbicides were used to keep the railroad free of vegetation. The creosote and polynuclear aromatic hydrocarbons are commonly associated with railroad ties and rail yards. The rail line (**Site No. 10**) is discussed in **Table B1** in **Appendix B**.

No additional railroad corridors were identified within the limits of the study area.

## 8.7 Cattle Dip Vats

Cattle dip vats were a response to cattle tick fever in the 1890s. The United States Department of Agriculture (USDA) initiated the cattle dip vat program in 1906 and approximately 3,200 cattle dip vats had been constructed by 1940.

Cattle dip vats were used until the 1960s and many vats have not been located or documented. Cattle dip vats were used to apply pesticides to cattle and other livestock, kill ticks, and thereby eliminate tick-borne diseases. The vats were typically constructed of concrete. They consisted of four sections; the entrance slide, dipping vat, exit stairs and drip pad. Cattle entered the chute leading to the entrance slide, slid down into the pesticide-filled vat, swam or walked across the vat and walked up the exit stairs to the drip pad. The vats were roughly four feet wide, seven feet deep, and 40 feet long as shown on **Figure 12**.

**Figure 11: Cattle Dip Vat**

Due to the relatively small size of the vat and the narrow profile, it is difficult to identify a cattle dip vat from aerial photographs, or in a wooded area. Cattle dip vats are typically identified when the land owner reveals the location, when they are located near historical cattle pens and chutes, and by happening upon them. To add to the difficulty in identifying historical cattle dip vats, many landowners removed the vats when the program was closed. They either dug up the vat or broke up the concrete and covered it with soil.

No cattle dip vats were identified within the study area through public record and database review, historical aerial photograph review, or site reconnaissance.

## 9.0 INTERVIEWS

GEC contacted Mr. Shane Gibbs, of the FDEP, via email on August 8, 2022, regarding a petroleum spill on the train tracks near 6525 Osceola Polk Line Road (**Site No. 10**). He provided an incident report for the spill.

No additional interviews were performed in the preparation of this assessment. The interview documentation is included in **Appendix K**.

## 10.0 SITE RECONNAISSANCE

A GEC representative performed a reconnaissance of the study area on August 24 and September 7, 2022. The purpose of the reconnaissance was to document current conditions and evaluate whether current land uses could result in hazardous material or petroleum product contamination of environmental media.

The properties within the project study area were visually inspected for evidence of contamination such as stressed vegetation, underground tank vent and fill pipes, dumping, accumulated areas of debris, evidence of buried materials, and ground staining.

The pond sites were visually inspected for evidence of contamination. The observations are as follows:

- **Joint Use Pond 1** is located on the east side of US 17/92 and contains two mobile home residences, two storage containers and two sheds. Two areas of dumping were observed, associated with the residences. Gas containers, 5-gallon buckets, dumped tires, and a plastic 55-gallon drum were observed in the areas of dumping.
- **Joint Use Pond 2A** is a wooded area on the west side of US 17/92. The majority of the land contained water at the time of the site reconnaissance.

- **Pond 2B** contained water at the time of the site reconnaissance. A buried gas utility pipeline was observed in the southern portion of the pond site.
- **Pond 3.1** is a mostly wooded area and contains a historical telephone repeater station (**Site No. 5**). The western portion of the area contains a pond, and the northeast corner is grassed land. Two soil mounds were observed in the southern portion.
- **Pond 4.1** is a mostly wooded area of land. No obvious signs of contamination were observed in the pond site.
- **Floodplain Compensation Pond.** The floodplain is a former cow pasture. The northern and eastern borders contain trees. A dumped boat was observed to the adjacent south of the floodplain. A gas pipeline and railroad tracks were observed south of the floodplain.

Details of the site reconnaissance are incorporated in the Potential Contamination Site Descriptions in **Table B1** in **Appendix B**. Photographs obtained for each potential contamination site are also included in **Table B1**. The Pond Site Photo Log is included in **Appendix L**.

## 11.0 CONCLUSIONS AND RECOMMENDATIONS

This CSER has identified the 12 sites that, in GEC's opinion, have some risk of contamination impacts to this project. The site locations are shown on **Figure A4** in **Appendix A**. **Table B1** in **Appendix B** summarizes the findings for each rated site.

### 11.1 Potential Contamination Sites

**Table 3: Low Risk Sites (7)**

Site No.	Site Name	Site Address	Risk Potential
1	Ebenezer Nursery	6635 South Orange Blossom Trail	Low
2	Spill at Train Tracks Near 6525 Osceola Polk Line Road	6525 Osceola Polk Line Road	Low
3	Duke Energy Intercession City Plan	6525 Osceola Polk Line Road	Low
4	Debris Management Site	US 17/92 at Old Tampa Highway	Low
6	Appliances	5624 South Orange Blossom Trail	Low
9	SVC Manufacturing Inc	1650 South Poinciana Boulevard	Low
10	Railroad	Study Area	Low

**Table 4: Medium and High Risk Sites (5)**

Site No.	Site Name	Site Address	Risk Potential
5	Historical Telephone Repeater Station	North of US 17/92	Medium
7	Marathon – Intercession City #090/Circle K #7226	1608 Shephard Lane	Medium
8	Leprino Foods	3152 Avenue B	Medium
11	Citrus Groves	Study Area	Medium
12	Area of Pits	US 17/92	High

**Table 5: Pond Risk Ratings**

Site Name	Site Address	Risk Potential
JOINT USE POND 1	East of US 17/92, between Ivy Mist Lane and Sundown Drive	Medium
JOINT USE POND 2A	West of US 17/92, south of Osceola Polk Line Road	Low
POND 2B	West of US 17/92, north of, and overlapping Osceola Polk Line Road	Low
POND 3.1	North of US 17/92	Medium
Floodplain Compensation Pond	North of Old Tampa Highway and the railroad tracks, west of Hicpochee Street	Low
POND 4.1	North of US 17/92, west of Myakka Street	Low

## 11.2 Level II Impact to Construction Assessments (ICA) Recommendations

Level II Impact to Construction Assessments (ICAs) are recommended for this project as follows:

- The debris pile on **Joint Use Pond 1** will require evaluation for solvents, paints, and petroleum products.
- The Historical Telephone Repeater Station (**Site No. 5**) will require evaluation of the structure and the wire chases/conduit for lead and asbestos containing materials. These features should be removed prior to excavating **Pond 3.1**.
- **Site No. 7** is an active gas station without known contamination impacts, and may require a Level II ICA prior to ROW acquisition.
- **Site No. 8** is located about 400 feet southeast of the proposed roundabout construction and does not appear to require a Level II ICA unless dewatering will be performed during the roundabout construction.
- The soil within the Historical Citrus Grove areas (**Site No. 11**) containing the realigned US 17/92 and **Joint Use Pond 1** should be evaluated for arsenic, pesticides, and herbicides.

- The Area of Pits (**Site No. 12**) is located adjacent-to, but outside of the current project area (**US 17/92 construction and Joint Use Pond 1**). There is a potential for unknown buried materials at this location. Test pits and contamination assessment may be necessary.

### 11.3 CSER Update

This CSER should be updated if ROW acquisition or construction will occur more than **one year** from the date of this report to determine if additional assessment is warranted due to significant changes in site conditions or project design.

## 12.0 LIMITATIONS

---

The findings, opinions, conclusions and recommendations presented herein are based in part on reasonably ascertainable information contained in the public record. GEC does not warrant or guarantee the accuracy or completeness of this information. Some of this public record information may be dated and not representative of conditions at the time this report was prepared (August 2022 through October 2022, and updated August 2023), or in the future. Additional limitations are as follows:

- Not discussed in this report are properties that have been historically undeveloped land, are associated with residential use and do not appear to pose a contamination risk, or are professional/commercial establishments that are not associated with hazardous materials or petroleum products.
- This study also does not include surveys of wetlands, endangered species, asbestos containing materials, lead-based paints, or other potential hazardous building materials.

## 13.0 USE OF THIS REPORT

---

GEC has prepared this report for the exclusive use of our clients, Stantec Consulting Services Inc, and FDOT, and for application to our client's project. GEC is not responsible for any other party's interpretation or use of this report's data or recommendations without our written authorization.

GEC has performed the services described in this report in a manner consistent with that level of care and skill ordinarily exercised by members of our profession currently practicing in Central Florida. No other representation is made or implied in this document.

The conclusions and recommendations should be disregarded if the final project design differs from the project description in this report. If such changes are contemplated, GEC should be retained to review the new plans to assess the applicability of this report in light of proposed changes.

## APPENDIX B: Tables

## Table B1: Potential Contamination Site Summary

Site No:		1	Risk Potential:		LOW	
Site Name		Ebenezer Nursery				
Site Address		6635 South Orange Blossom Trail				
Site Location		West of US 17/92, North of Ivy Mist Lane				
Distance/Direction		About 50 feet west of US 17/92				
Facility ID Nos:		n/a				
Database Sources:		n/a				
Historical Land Use		Citrus Groves				
Current Land Use		Plant Nursery				
Contaminants		Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a	Cleanup Date:		n/a	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** This plant nursery was identified by aerial photograph review and confirmed during the site reconnaissance. The eastern portion of the property historically contained citrus groves from 1969 through 1983. The area was developed with a residence in 1996 and has contained a plant nursery since 2018.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site is an operating plant nursery containing an office building/mobile home-type structure and plant beds.

**CONCLUSIONS:** Due to the potential for roadway improvements being on the south side of US 17/92 across from this site, the nursery facility has been assigned a CRR of **Low**.

Looking west at the entrance of the plant nursery.

Site No:		2	Risk Potential:		LOW	
Site Name		Spill at train tracks near 6525 Osceola Polk Line Road				
Site Address		6525 Osceola Polk Line Road				
Site Location		Adjacent to Osceola Polk Line widening				
Distance/Direction		Adjacent to construction				
Facility ID Nos:		Incident #55627				
Database Sources:		SPILLS				
Historical Land Use		Railroad				
Current Land Use		Railroad				
Contaminants		Petroleum Products				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		03/28/16	Cleanup Date:			
		Soil		Groundwater		
Documented/ Known Impacts:		n/a		n/a		

**PUBLIC RECORDS:** A Florida Department of Environmental Protection incident report states that a spill of 2,100 gallons of an oil and water mixture occurred onto the soil at the train tracks near 6525 Osceola Polk Line Road on March 28, 2016. Remediation occurred the following day, including soil excavation and use of a vacuum truck. Soil samples did not reveal any contamination above applicable Soil Cleanup Target Levels and a No Further Action status was given to the site.

**INTERVIEW INFORMATION:** GEC contacted Mr. Shane Gibbs via email on August 8, 2022, regarding the spill. Mr. Gibbs stated that the Office of Emergency Response considers the incident closed and provided an incident report dated March 28, 2016.

**SITE OBSERVATIONS:** n/a

**CONCLUSIONS:** Due to the No Further Action status, the spill has been assigned a CRR of **Low**.

View of Google Earth of the described location of the spill.

Table B1  
Potential Contamination Site Summary  
GEC Project No. 4846E

Site No:		3	Risk Potential:		LOW
Site Name		Duke Energy Intercession City Plant			
Site Address		6525 Osceola Polk Line Road			
Site Location		North of Osceola Polk Line Road			
Distance/Direction		About 360 feet northwest of Pond 2B			
Facility ID Nos:		8840909			
Database Sources:		LUST, AST, CLEANUP SITES, DWM CONTAM, RESP PARTY			
Historical Land Use		Undeveloped Wooded Land			
Current Land Use		Power Plant			
Contaminants		Petroleum Products

		6/30/95		2/23/99	
		7/14/06		On-going	
		Soil		Groundwater	
Documented/ Known Impacts:		No		No	

**PUBLIC RECORDS:** This combustion turbine plant began operation in 1974. A discharge was reported at the site January 1990 when petroleum impacts were found in five monitoring wells onsite. A September 2005 Supplemental Site Assessment Report found soil and groundwater contamination. Natural Attenuation Monitoring (NAM) was conducted from April 2006 through October 2007 when it was paused, and resumed again in May 2012. The latest NAM report from January 2020 found no contamination for three consecutive sampling events. Supplemental soil assessment was performed in February 2021, and found petroleum constituents below applicable Soil Cleanup Target Levels, and did not reflect additional soil impacts on-site. An Engineering Control and soil restriction boundary was put in place. Impacted soil was covered with an asphalt cap and no activities are allowed to be performed in this area. A Declaration of Restrictive Covenant was granted to the site in August 2022.

A fuel discharge was reported at the site in June 2006. Soil assessment and source removal activities occurred in January 2007. Groundwater contamination was detected in a March 2007 groundwater assessment and Natural Attenuation Monitoring was recommended for the discharge. A March 2016 sampling event found contamination above applicable Groundwater Cleanup Target Levels, but below Natural Attenuation Default Concentrations and recommended the site be given a No Further Action with Controls status.

The latest routine tank inspection was performed in June 2021 and found the facility is currently in compliance.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site is an operating power plant.

**CONCLUSIONS:** Based on the distance from the soil and groundwater impacts to the proposed construction, land use restriction, and currently being in compliance this site is assigned a Contamination Risk Rating (CRR) of **Low**.

View of the eastern portion of the power plant from the southern border.

Table B1  
Potential Contamination Site Summary  
GEC Project No. 4846E

Site No:		4	Risk Potential:		LOW	
Site Name		Debris Management Site				
Site Address		17/92 At Old Tampa Highway				
Site Location		North of US 17/92, west of Old Tampa Highway				
Distance/Direction		About 100 feet north of US 17/92				
Facility ID Nos:		99959				
Database Sources:		SWF/LF				
Historical Land Use		Undeveloped Land				
Current Land Use		Disaster Debris Storage Area				
Contaminants		Petroleum Products, Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a		Cleanup Date:	n/a	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** This site has been registered as a disaster debris management site since 2012. The site was utilized in September 2017 and a December 18, 2017, inspection found that all debris had been removed and there was no evidence of a pollutant release. This location was utilized again in August 2019 to store waste materials and debris from hurricane Dorian. A September 2019 closure letter states that all debris had been removed and there was no evidence of a pollutant release.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site contained piles of concrete rubble at the time of the site visit. The piles did not appear to contain hazardous materials.

**CONCLUSIONS:** Based on the debris removal and lack of pollutant releases, the disaster debris management site has been assigned a CRR of **Low**.

View of concrete rubble in debris management site.

Site No:		5		Risk Potential:		MEDIUM	
Site Name		Historical Telephone Repeater Station					
Site Address		North Side of US 17/92					
Site Location		Within <b>Pond 3.1</b>					
Distance/Direction		About 160 feet north of US 17/92					
Facility ID Nos:		N/A					
Database Sources:		Aerial Photographs					
Historical Land Use		Telephone Repeater Station					
Current Land Use		Abandoned building					
Contaminants		Hazardous Materials					
TANKS	U/A	Capacity (gal)	Content			Installed	Removed
n/a							
Discharge Date:		n/a		Cleanup Date:		n/a	
		Soil			Groundwater		
Documented/ Known Impacts:		No			No		

**PUBLIC RECORDS:** GEC identified a small building that was constructed in the 1950’s about 160 feet north of US 17/92. Telephone companies historically had underground lines that would periodically rise up into repeater stations to strengthen the signal. The underground telephone lines were often lead and/or asbestos clad. The repeater station is located within the boundaries of proposed **Pond 3.1**.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site is an abandoned historical telephone repeater station. The inside was inaccessible due to vegetation. Large, plastic corrugated culvert pipes were observed adjacent to the building.

**CONCLUSIONS:** Based on the potential for lead or asbestos clad telephone lines to exist related to this building, and it being located within the footprint of Pond 3.1, the repeater station has been assigned a CRR of **Medium**.

View of the abandoned telephone repeater station.

Table B1  
Potential Contamination Site Summary  
GEC Project No. 4846E

Site No:		6	Risk Potential:		LOW	
Site Name		Appliances				
Site Address		5624 South Orange Blossom Trail				
Site Location		South of South Orange Blossom Trail				
Distance/Direction		Adjacent south of US 17/92				
Facility ID Nos:		SQG_103237				
Database Sources:		SQG				
Historical Land Use		Office Building				
Current Land Use		Vacant Building				
Contaminants		Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a	Cleanup Date:		n/a	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** This site was registered as a small quantity hazardous waste generator. An August 2018 inspection marked the location as out of business and no contamination impacts have been recorded at this site.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The building is vacant, with a parking lot and fenced in back yard area.

**CONCLUSIONS:** Due to the lack of recorded contamination impacts and its abandoned nature, the facility has been assigned a CRR of **Low**.

Looking south at the vacant building.

Site No:		7	Risk Potential:		MEDIUM	
Site Name		Marathon – Intercession #090/Circle K #7226				
Site Address		1608 Shepherd Lane				
Site Location		Southwest corner of the US 17/92 and Shepherd Lane intersection				
Distance/Direction		20 feet south of US 17/92				
Facility ID Nos:		8513740, FLD984254276				
Database Sources:		RCRA-VSQG, LUST, UST, DWM CONTAM				
Historical Land Use		Gas Station				
Current Land Use		Gas Station				
Contaminants		Petroleum Products, Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
2	U	9,684	Unleaded Gas		03/01/96	In Use
1	U	9,684	Vehicular Diesel		03/01/96	In Use
1	U	8,000	Unleaded Gas		12/01/80	03/01/96
2	U	4,000	Unleaded Gas		12/01/80	03/01/96
Discharge Date:		11/23/88 04/17/91	Cleanup Date:		12/03/01 07/21/03	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** Discharges were reported at this site in November 1988 and April 1991. Assessment for the 1988 discharge was conducted in 1994 through 1996, and again in 2000 through 2001. Quarterly monitoring was completed in July 2001 and due to lack of remaining contamination impacts, a Site Rehabilitation Completion Order was issued in December 2001 by FDEP.

The second discharge was determined to be connected with the 1988 discharge, due to a high water table elevation. The discharges were combined, and a No Further Action regulatory closure order was issued on July 21, 2003.

One of the underground tanks was accidentally overfilled in August 2018. Approximately 30 gallons of product was contained to the asphalt and cleaned by a contractor. No assessment was required by FDEP. Equipment testing in 2019 also indicated failing results; repairs were promptly made and no discharge was reported.

This site is also registered as a small quantity hazardous waste generator. No contamination impacts have been recorded at this site regarding hazardous materials.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site is an operating gas station.

**CONCLUSIONS:** Due to the proposed right of way taking along the south side of US 17/92, the gas station has been assigned a CRR of **Medium**.

View of the Circle K gas station. A fuel pump can be seen on the right.

Discharge Date:		n/a	Cleanup Date:	n/a		
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** Two 12,000-gallon underground storage tanks were abandoned in place at this site in October 1990. A March 1991 Closure Assessment Addendum Review stated that concentrations of metals in the groundwater were above state drinking water standards. There are no records of post closure monitoring or clean up at the site regarding the metals, therefore groundwater contamination could still exist. The former tanks are located about 430 feet southeast of proposed construction. It does not appear excavation and dewatering would occur in this area of construction.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** A 1,000-gallon aboveground emergency generator diesel tank was observed at the facility. No records were found for this tank, and no evidence of spills, leaks, or discharges were observed.

**CONCLUSIONS:** Based on the known groundwater impacts, the facility has been assigned a CRR of **Medium**.

The former tanks are located about 400 feet southeast from the northern project limit and appear unlikely to affect the proposed construction if dewatering will not be performed.

View of the facility and emergency generator with integrated diesel fuel belly tank.

Site No:		9	Risk Potential:		LOW	
Site Name		SVC Manufacturing Inc.				
Site Address		1650 South Poinciana Boulevard				
Site Location		Northwest corner of the US 17/92 and South Poinciana Boulevard intersection				
Distance/Direction		100 feet north of US 17/92				
Facility ID Nos:		9808670, FLD984175281				
Database Sources:		STCM, CHAZ				
Historical Land Use		Undeveloped Land				
Current Land Use		Warehouse Building				
Contaminants		Petroleum Products, Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
1	U	2,000	Emergency Generator Diesel		11/01/06	In Use
Discharge Date:			Cleanup Date:			
		Soil		Groundwater		
Documented/ Known Impacts:						

**PUBLIC RECORDS:** No discharges have been reported at this facility. Tank records indicate the generator belly tank was installed in 2006 and has generally been in compliance during routine inspections from 2006 through 2016. Violations were noted at the facility during a routine compliance inspection in 2018. However, no violations indicated the potential for contamination impacts. The facility returned to compliance on January 16, 2019.

This site is also registered as a small quantity hazardous waste generator. An April 2008 facility inspection conducted by FDEP revealed several violations and compliance issues. The majority of the violations recorded were records-keeping based and lack of staff training. However, lack of waste determinations and improper storage and labeling of materials and waste materials was also recorded. No violations indicating apparent contamination impacts were included. The facility was brought back into compliance in 2009 following completion of FDEP’s requirements.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site contains a large warehouse and semi-truck parking. The majority of the facility was inaccessible due to gates and fences. Only a portion of the warehouse falls within the 500 foot study area.

**CONCLUSIONS:** Due to the bulk of this facility falling outside the 500-foot search radius, the lack of recorded contamination, and the business currently being in compliance, the facility has been assigned a CRR of **Low**.

Looking west at the eastern side of the manufacturing facility.

Table B1  
Potential Contamination Site Summary  
GEC Project No. 4846E

Site No:		10	Risk Potential:		LOW	
Site Name		Railroads				
Site Address		Study Area				
Site Location		North of US 17/92, intersecting Osceola Polk Line Road				
Distance/Direction		280 feet to 1,000 feet north of US 17/92				
Facility ID Nos:		n/a				
Database Sources:		Aerial Photograph				
Historical Land Use		Railroad				
Current Land Use		Railroad				
Contaminants		Hazardous Materials and Petroleum Products, Arsenic, Herbicides, Polycyclic/Polynuclear Aromatic Hydrocarbons				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a		Cleanup Date:	n/a	
		Soil			Groundwater	
Documented/ Known Impacts:		No			No	

**PUBLIC RECORDS:** A historical rail line was observed within the study area, ranging from about 280 feet to 1,000 feet north of US 17/92, intersecting Osceola Polk Line Road, and about 90 feet south of the **Floodplain Compensation Pond**. Existing and historical rail lines have several common chemical constituents of concerns as follows:

- Arsenic: The most commonly used arsenic-containing products were herbicides, pesticides, insecticides, and wood-treating agents such as chromated copper arsenate.
- Creosote: Creosote is used to coat railroad ties.
- Polynuclear aromatic hydrocarbons: Polynuclear aromatic hydrocarbons are a coal tar and creosote by-product. Coal tar is more commonly associated with rail yards.
- Other inorganic constituents used in herbicides.

Due to its residual nature, arsenic is the most commonly occurring chemical constituent related to railroad beds, and liberal applications of herbicides were used to keep the railroad free of vegetation. The creosote and polynuclear aromatic hydrocarbons are commonly associated with railroad ties and rail yards.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** Railroad tracks were observed within the 500-foot radius study area, and intersecting with Osceola Polk Line Road.

**CONCLUSIONS:** Based on the railroad falling outside the areas of improvements, it has been assigned a CRR of **Low**.

View of the railroad (purple) on Google Earth.

Site No:		11	Risk Potential:		MEDIUM	
Site Name		Historical Citrus Groves				
Site Address		Western Half of Study Area				
Site Location		East and West of US 17/92				
Distance/Direction		Adjacent to US 17/92				
Facility ID Nos:		n/a				
Database Sources:		Aerial Photographs				
Historical Land Use		Citrus Groves				
Current Land Use		Residential, Undeveloped Wooded Land				
Contaminants		Pesticides, Herbicides, Arsenic				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a		Cleanup Date:	n/a	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** The study area contained some citrus groves in the western portion from 1969 through 1983. Agricultural land and citrus groves typically have environmental concerns associated with them. These concerns include pesticide/herbicide storage and usage, grove heating during cooler winter months (smudge pots and other grove heating equipment), tractor and equipment maintenance and fueling, underground and aboveground fuel storage tanks, irrigation pumps and maintenance, and asbestos irrigation lines.

Ebenezer Nursery (**Site No. 1**) and **Joint Use Pond 1** contained historical citrus groves. The potential exists for contamination impacts at these locations.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The former citrus groves have been developed into areas containing residence and undeveloped wooded land.

**CONCLUSIONS:** Due to the potential for pesticide and herbicide contamination to exist from the historical citrus groves within the US 17/92 widening and the adjacent **Joint Use Pond 1**, the land use has been assigned a CRR of **Medium**.

View of citrus groves on the west side of US 17/92 and within the footprint of **Joint Use Pond 1** on the 1969 aerial photograph.

Site No:		12	Risk Potential:		MEDIUM	
Site Name		Area of Pits				
Site Address		US 17/92				
Site Location		East of West/South end of alignment				
Distance/Direction		Adjacent to US 17/92				
Facility ID Nos:		n/a				
Database Sources:		NRCS Soil Survey, Quadrangle Maps, Aerial Photographs				
Historical Land Use		Pit				
Current Land Use		Vacant field				
Contaminants		Unknown				
TANKS	U/A	Capacity (gal)	Content		Installed	Removed
n/a						
Discharge Date:		n/a		Cleanup Date:	n/a	
		Soil		Groundwater		
Documented/ Known Impacts:		No		No		

**PUBLIC RECORDS:** This site is shown on the NRCS Soil Survey as an Area of Pits.

It is shown on the 1955 through 1980 quadrangle maps as a rectangular outline of the 75-foot contour line.

It is shown in the 1944 as a rectangular outline with some soil disturbances inside it. The area was allowed to grow without disturbance until the early 2000s when it was cleared, and drainage ditches excavated around the outside edge of the property.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** This is a grassy field.

**CONCLUSIONS:** Based on the location of the “Area of Pits” being just outside the study area and having a potential for historical material burial within the rectangular property boundaries, it has been assigned a CRR of **Medium**.

Area of Pits is visible as rectangle on the 1941 aerial photograph.

Area of Pits in 2021 aerial photograph.

**Table B2: Aerial Photograph Review Summary**

**Table B2**

Osceola County, Florida

FPID No. 437200-2-22-01

GEC Project No. 4846E

Page 1 of 1

Site No.	Site Name	Site Address	Year First Observed in Aerial Photographs	Comments
1	Ebenezer Nursery	6635 South Orange Blossom Trail	2021	This site contained citrus groves from 1969 through 1983. In 1996, a residence is visible at this site and in 2021 contains a plant nursery.
2	Spill at train tracks near 6525 Osceola Polk Line Road	n/a	1969	The spill is not visible on the aerial photographs. Osceola Polk Line Road is first visible intersecting the train tracks in the 1969 photograph.
3	Duke Energy Intercession City Plant	6525 Osceola Polk Line Road	1983	The site was undeveloped land until 1969 when it contained citrus groves. The land was cleared in 1974. The energy plant and the two approximately 4,000,000 gallon tanks are visible in 1983. In 1993, a third large tank has been installed adjacent to these tanks and the facility has been expanded northward.
4	Debris Management Site	17/92 At Old Tampa Highway	1941	The site was cleared of vegetation in 1941. The rail line is adjacent to the northern border of the site in 1941, and citrus groves were located adjacent to the south of the site in 1944.
5	Historical Telephone Repeater Station	North of SR 600	1969	The repeater station building is first visible in the 1969 aerial photograph. Buildings are located the east and west of the telephone repeater station in 1969 and are absent in 2006. The repeater station is not visible in the 2021 aerial photograph due to tree cover.
6	Appliances	5624 South Orange Blossom Trail	1969	The current building is first visible at this location in 1969, and a parking lot and fenced in backyard area are visible adjacent to the building in 2017.
7	Marathon - Intercession #090/Circle K #7226	1608 Shepherd Lane	1983	A house is visible in this location in 1969. The current gas station building is first visible in 1983. The fueling canopy for the gas pumps is visible in the 2006 photograph.
8	Leprino Foods	3152 Avenue B	1983	This site was historically undeveloped wooded land and the building is first visible in 1983.
9	SVC Manufacturing Inc.	1650 South Poinciana Boulevard	1983	This site was historically undeveloped wooded land. The land contains several cattle trails in the 1969 photograph. The eastern portion of the SVC facility is visible in 1983, and has been expanded westward in 2006.
10	Railroads	n/a	1941	The rail line is visible starting in the 1941 aerial photograph, running north of US 17/92. A railroad spur crosses US 17/92 just east of the study area beginning in 1983. The railroad remains unchanged through 2021.
11	Citrus Groves	n/a	1944	Citrus groves are visible south of US 17/92 in the central portion of the study area in 1944. In 1969, citrus groves are located on the east and west side of US 17/92 in the western portion of the study area. A small portion of citrus groves are within the boundary of <b>Joint Use Pond 1</b> through 1983. The citrus groves are mostly absent in 1993, aside from a small residential grove north of US 17/92 in the central portion of the study area.
12	Area of Pits	US 17/92	1941	This site is visible as a rectangular feature in 1941. It was cleared prior to 2006, and has drainage ditches around the perimeters.

## **APPENDIX D: Definitions of Common Report Terms**

Aboveground Storage Tank (AST) - A storage tank that is situated on the ground surface and may or may not be installed on a concrete pad with secondary spill containment.

Active Remediation (AR) - Implementation of an approved Remedial Action Plan.

Contamination - The presence of any material or chemical contained within the soil, surface water, sediment, or groundwater on or adjacent to the project corridor, that may require assessment, remediation, or special handling, or that has a potential for liability.

Contamination Risk Rating (CRR) - Site risk rating system defined in Chapter 20 of the FDOT PD&E Manual.

Engineering Control (EC) - A modification to a site to reduce or eliminate the potential for migration of, and exposure to, contaminants of concern. Examples of ECs include slurry walls, sheet pile walls, and engineered liners to prevent exposure.

Hazardous Material - Any solid, liquid, or gas that has the potential to harm people, other living organisms, property, or the environment, either by itself or through interaction with other factors. Hazardous material may be radioactive, flammable, explosive, toxic, corrosive, biohazardous, an oxidizer, an asphyxiant, a pathogen, an allergen, or may have other characteristics that render it hazardous in specific circumstances. These materials may threaten workers through occupational exposure and the general public in their homes, communities, and general environment. Exposure to these materials can occur near the site of generation, along the path of its transportation, or near their ultimate disposal sites. Hazardous materials are often subject to laws and regulations on the use and handling of such materials and may differ depending on the activity or status of the material.

Institutional Controls (IC) - A restriction on use of, or access to, a site to eliminate or minimize exposure to contaminants of concern. Examples of ICs include deed restrictions, use restrictions, or restrictive zoning.

Natural Attenuation Monitoring (NAM) - A means of conducting site rehabilitation in which natural degradation of media contaminants are monitored for extended periods of time provided that human health, public safety, and the environment are protected.

No Further Action with Conditions (CNFA) - No further assessment or remediation is required at a site provided that certain conditions are met as approved by the lead regulatory agency. Conditional No Further Actions can be granted to sites that employ ICs and/or ECs as part of the site rehabilitation strategy.

No Further Action without Conditions (NFA) - No further assessment or remediation is required at a site. No contaminants are present at the site above default or approved alternative clean-up standards.

Petroleum Products - Liquid crude oil derivatives that are derived by distillation, cracking, hydro forming and/or other petroleum refinery processes falling under the description of either "Gasoline Analytical Group," "Kerosene Analytical Group" or "Used Oil" as defined in Florida Administrative Code (FAC) 62-770.200(24), (29) and (64), respectively. These materials include, but are not limited to: leaded and unleaded gasoline, gasohol, aviation and jet fuels, diesel fuel, kerosene, new or used motor oil, hydraulic fluid, and gear oil.

Potential Hazardous Material or Petroleum Contamination Site - A potential hazardous material or petroleum contamination site is a parcel of land upon which hazardous materials or petroleum products are produced, stored, accumulated, used, or disposed of. These sites typically include existing or former gasoline stations, dry cleaners, auto repair facilities, and other businesses where hazardous substances or petroleum product are present. The presence of hazardous substances and/or petroleum products does not mean that contamination is present, but merely indicates that the potential for contamination exists if the materials are not handled or disposed of properly.

Remedial Action Plan (RAP) - A plan that details a means by which contamination may be cleaned up.

Site Assessment Report (SAR) - Summarizes all tasks that were implemented pursuant to the Contamination Assessment.

Site Rehabilitation Complete Report (SRCR) - A report that describes that cleanup goals have been met.

Site Rehabilitation Completion Order (SRCO) - An order issued by the lead regulatory agency that approves the SRCR. No further assessment or remediation activities need to be conducted at the site once an SRCO has been issued unless a new release is discovered.

Source Removal (SR) - The removal of free petroleum product or excessively contaminated soil.

Underground Storage Tank (UST) - A storage tank that has been installed below the ground surface that may or may not contain secondary containment or leak detection systems. The FDEP has compiled several database lists that are useful in identifying potential sources of hazardous material or petroleum product contamination.

## APPENDIX E: Contamination Risk Rating Descriptions

The contamination potential risk rating system was developed by FOOT and is included in Part 2, Chapter 20 of the PD&E Manual, dated July 1, 2023. The rating system incorporates four levels of risk:

**1. No** - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.

**2. Low** - A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.

**3. Medium** - After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium". Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.

**4. High** - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT. review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SUBJECT PROPERTY INFORMATION

#### ADDRESS

6635 S ORANGE BLOSSOM TRAIL AND 1608 SHEPHERD LANE  
KISSIMMEE, FL 34758

### TARGET PROPERTY SEARCH RESULTS

The Target Property was identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### ***Other Ascertainable Records***

ASBESTOS: ASBESTOS

A review of the ASBESTOS list, as provided by EDR, and dated 02/11/2022 has revealed that there are 2 ASBESTOS sites within the requested target property.

<u>Site</u>	<u>Address</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
OSCEOLA COUNTY DEMOL	5800 S. ORANGE BLOSS	A1 / 3	22
OSCEOLA COUNTY ABATE	5800 S. ORANGE BLOSS	A2 / 3	22

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page Numbers and Map Identifications refer to the EDR Area/Corridor Report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### *Lists of Federal RCRA generators*

##### RCRA-LQG: RCRA - Large Quantity Generators

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the requested target property.

<u>Site</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
BEST ENGINEERING SUR EPA ID:: FLD984241414	1820 AVE A	SSW 0 - 1/8 (0.082 mi.)	B6 / 7	105

##### RCRA-SQG: RCRA - Small Quantity Generators

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the requested target property.

<u>Site</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
KISSIMMEE UTILITY AU EPA ID:: FLR000025932	6075 OLD TAMPA HWY	NNE 1/8 - 1/4 (0.161 mi.)	8 / 2	157

##### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the requested target property.

<u>Site</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID / Focus Map(s)</u>	<u>Page</u>
CIRCLE K #7226 EPA ID:: FLD984254276	1608 SHEPHERD LN	SSW 0 - 1/8 (0.023 mi.)	3 / 3	23

#### *Lists of state and tribal landfills and solid waste disposal facilities*

##### SWF/LF: Solid Waste Facility Database

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the requested target property.

Waste Description:	CHROMIUM
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F006
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Waste Code:	F019
Waste Description:	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Lists of Federal NPL (Superfund) sites***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A
Date Made Active in Reports: 05/31/2022	Last EDR Contact: 08/02/2022
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/10/2022
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2022	Source: EPA
Date Data Arrived at EDR: 05/05/2022	Telephone: N/A
Date Made Active in Reports: 05/31/2022	Last EDR Contact: 08/02/2022
Number of Days to Update: 26	Next Scheduled EDR Contact: 10/10/2022
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Next Scheduled EDR Contact: 11/28/2011  
Data Release Frequency: No Update Planned

### ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2022  
Date Data Arrived at EDR: 05/05/2022  
Date Made Active in Reports: 05/31/2022

Data Release Frequency: Quarterly

### ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021  
Date Data Arrived at EDR: 06/24/2021  
Date Made Active in Reports: 09/20/2021  
Number of Days to Update: 88

Source: Environmental Protection Agency  
Telephone: 703-603-8704  
Last EDR Contact: 06/27/2022  
Next Scheduled EDR Contact: 10/10/2022  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/27/2022  
Date Data Arrived at EDR: 05/05/2022

Data Release Frequency: Quarterly

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### ***State and tribal institutional control / engineering control registries***

#### ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

### ***Lists of state and tribal brownfield sites***

#### BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

#### BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Local Brownfield lists***

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

#### **RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

### FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 08/18/2017
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/04/2017
	Data Release Frequency: No Update Planned

### FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 08/18/2017
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/04/2017
	Data Release Frequency: No Update Planned

### MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 03/11/2022	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 03/15/2022	Telephone: 301-415-7169
Date Made Active in Reports: 06/14/2022	Last EDR Contact: 07/13/2022
Number of Days to Update: 91	Next Scheduled EDR Contact: 10/31/2022
	Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### COAL ASH DOE: Steam-Electric Plant Operation Data

A listing of power plants that store ash in surface ponds.

Date of Government Version: 12/31/2020	Source: Department of Energy
Date Data Arrived at EDR: 11/30/2021	Telephone: 202-586-8719
Date Made Active in Reports: 02/22/2022	Last EDR Contact: 06/02/2022
Number of Days to Update: 84	Next Scheduled EDR Contact: 09/12/2022
	Data Release Frequency: Varies

### COAL ASH EPA: Coal Combustion Residues Surface Impoundments List

A listing of coal combustion residues surface impoundments with high hazard potential ratings.

Date of Government Version: 01/12/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/05/2019	Telephone: N/A
Date Made Active in Reports: 11/11/2019	Last EDR Contact: 05/25/2022
Number of Days to Update: 251	Next Scheduled EDR Contact: 09/12/2022
	Data Release Frequency: Varies

### PCB TRANSFORMER: PCB Transformer Registration Database

The database of PCB transformer registrations that includes all PCB registration submittals.

Date of Government Version: 09/13/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/06/2019	Telephone: 202-566-0517
Date Made Active in Reports: 02/10/2020	Last EDR Contact: 05/06/2022
Number of Days to Update: 96	Next Scheduled EDR Contact: 08/15/2022
	Data Release Frequency: Varies

### RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 06/23/2022
Number of Days to Update: 84	Next Scheduled EDR Contact: 10/10/2022
	Data Release Frequency: Quarterly

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

### HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Telephone: 202-586-3559  
Last EDR Contact: 07/26/2022  
Next Scheduled EDR Contact: 11/14/2022  
Data Release Frequency: Varies

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/12/2016  
Date Data Arrived at EDR: 10/26/2016  
Date Made Active in Reports: 02/03/2017

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

### FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

### HW GEN: Hazardous Waste Generators

Small Quantity Hazardous Waste Generators are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities greater than 100 Kg but less than 1,000 Kg in any one calendar month. Large Quantity Generators of Hazardous Waste are tracked in this coverage based on their notification to the Department of Environmental Protection as to their handler status, or based on inspections conducted at their facilities. These facilities are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities equal to or greater than 1,000 Kg in any one calendar month.

### PCS: Permit Compliance System

PCS is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Date of Government Version: 07/14/2011	Source: EPA, Office of Water
Date Data Arrived at EDR: 08/05/2011	Telephone: 202-564-2496
Date Made Active in Reports: 09/29/2011	Last EDR Contact: 06/28/2022
Number of Days to Update: 55	Next Scheduled EDR Contact: 10/17/2022
	Data Release Frequency: Semi-Annually

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: N/A  
Date Data Arrived at EDR: N/A

### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022  
Date Data Arrived at EDR: 05/09/2022  
Date Made Active in Reports: 07/28/2022

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Department of Children & Families

Source: Provider Information

Telephone: 850-488-4900

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetlands Inventory

## APPENDIX H: FDEP Database List

The FDEP databases used for this study and their common abbreviations are listed below.

- Florida's State Funded Action Sites (SHWS),
- Florida Sites List – (FL Sites),
- State Brownfield Sites Listing (Brownfields),
- Cattle Dip Vats (CDV),
- Ethylene Di-Bromide Database (EDB),
- Dry Cleaners (DRYCLEANERS),
- Priority Cleaners (PRIORITY CLEANERS),
- Dry Cleaning Solvent Program Cleanup Sites (SCRD DRYCLEANERS),
- State & Federal Institutional Controls Registry (ENG CONTROLS),
- State & Federal Institutional Controls Registry (INST CONTROLS),
- Voluntary Cleanup Priority Listing (INDIAN VCP),
- Voluntary Cleanup Sites (VCP),
- Historical Dry Cleaners (EDR HIST CLEANERS),
- Leaking Aboveground Storage Tank Listing (LAST),
- Leaking Underground Storage Tank Listing (LUST),
- Leaking Underground Storage Tanks on Indian Land (INDIAN LUST),
- Underground Storage Tanks on Indian Land (INDIAN UST),
- National Pollution Discharge Elimination System Facilities (NPDES),
- Oil and Hazardous Materials Incidents (SPILLS, SPILLS 80, SPILLS 90),
- Solid Waste Facilities (SWF),
- Underground Storage Tanks (UST),
- Aboveground Storage Tanks (AST),
- Underground Injection Control Wells (UIC),
- Voluntary Cleanup Sites (VCS), and
- NPL and State Funded Waste Cleanup Sites (NPL).

Information regarding the date the databases were last updated are included within the EDR Radius Map Report provided in **Appendix G**. Descriptions of the above-listed Florida databases and information sources are also provided in the EDR report.

## **APPENDIX I: Federal Database List**

Federal databases have been compiled for identifying potential sources of hazardous materials contamination. The databases used for this evaluation include:

- Aerometric Information Retrieval System I Air Facility Subsystem (AIRS),
- Clandestine Drug Laboratory Locations (CDL),
- National Clandestine Laboratory Register (HIST CDL),
- Comprehensive Environmental Response, Compensation & Liability Information System (CERCLIS),
- Delisted National Priorities List (DELISTED NPL),
- Comprehensive Environmental Response, Compensation & Liability Information System No Further Remedial Action Planned (CERC-NFRAP),
- Comprehensive Environmental Response, Compensation & Liability Information System Lien Information (LIENS 2),
- Superfund (CERCLA) Consent Decrees (CONSENT),
- Corrective Action Report (CORRACTS),
- Incident and Accident Data (DOT OPS),
- Engineering Controls Site List (US ENG Controls),
- Sites with Institutional Controls (US INST Controls),
- Land Use Control Information System (LUCIS),
- Federal Facility Site Information Listing (Federal Facility),
- Emergency Response Notification System Facility Registry System (ERNS),
- Hazardous Materials Incident Reporting System (HMIRS),
- Open Dump Inventory (ODI),
- Recycling Centers (SWRCY),
- Government Archives LUST (RGA LUST),
- DWM Contaminated Sites (DWM CONTAM),
- Resource Conservation & Recovery Act- Large Quantity Generators (RCRA - LQG),
- Resource Conservation & Recovery Act- Small Quantity Generators (RCRA - SQG),
- Resource Conservation & Recovery Act- Generator Conditionally Exempt Small Quantity Generator Facilities (RCRA-CESQG),
- Resource Conservation & Recovery Act- Non- Generator Facilities (RCRA Non Gen),
- Resource Conservation & Recovery Act- Treatment, Storage & Disposal Facilities (RCRA-TSDF),
- Toxic Substance Control Act Inventory (TSCA),
- Open Dump Inventory On Tribal Lands (INDIAN ODI),
- Indian Reservations (INDIAN RESERV),
- Department Of Defense Sites (DOD),
- Formerly Used Defense Sites (FUDS),
- National Priorities List (NPL),
- Proposed National Priorities List (Proposed NPL),
- National Priorities List Liens (NPL Liens),
- Delisted National Priorities List (Delisted NPL),
- Resource Conservation & Recovery Act-Corrective Action Facilities (CORRACTS), and
- Record of Decision System (ROD).

Information regarding the date the databases were last updated are included within the EDR Radius Map Report provided in **Appendix G**. Descriptions of the above-listed federal databases and information sources are also provided in the EDR report.

#### Incident Narrative:

On March 28, 2016 at 21:25, Responder Hall received State Watch Office notification 2016-2514 regarding discharge of 2 gallons of lubricating oil from a locomotive in Davenport. The release was reportedly located on the tracks near 6525 Osceola Polk Line Road.

I contacted CSX and spoke with Jason (904-279-7027) who indicated 2-5 gallons of lubricating oil in a sump had mixed with several thousand gallons of rainwater. During heavy rains the sump overflowed, releasing an estimated 2,100 gallons of oil/water mix to the ground surface at the indicated location.

On March 29, 2016, SWS and Arcadis Engineering conducted site remediation activities at the incident location. An ISRR was completed by Arcadis and submitted May 3, 2016.

The ISRR was reviewed 1/6/17 and deemed sufficient to close the case. All sampled parameters were below lab detection limits excluding benzo(a)pyrene and benzo(b)fluoranthene, which were detected between the MDL and PQL. This is deemed sufficient to issue a No Further Action Letter.

No further action is required of OER; this case may be closed.

Approved By: Daniel K. Hall

## Memorandum

**TO:** Natasha Lampkin, Administrator, Petroleum Restoration Program, FDEP

**FROM:** Dane Petersen, Assistant General Counsel, OGC, FDEP *AP*

**SUBJECT:** Duke Energy Intercession City Combustion Turbine Plant - Declaration of Restrictive Covenant, FDEP Site ID# 49/8840909; OGC 21-1238

**DATE:** August 22, 2022

---

I have reviewed the attached Declaration of Restrictive Covenant (Covenant) for the above referenced site. It appears to meet all the legal requirements for such an institutional control. Therefore, I recommend that you sign the Covenant in the presence of a notary public and two witnesses. Once the Covenant has been signed, please transmit the fully executed document to Grantor's representative for recording, and request that you receive a copy of the recorded document.

Please contact me at [dane.petersen@floridadep.gov](mailto:dane.petersen@floridadep.gov) or 850-245-8316, or Jordan Bennett at [jordan.r.bennett@floridadep.gov](mailto:jordan.r.bennett@floridadep.gov) or 850-245-2206 with any questions.

Charlotte, NC 28202

### **DECLARATION OF RESTRICTIVE COVENANT**

THIS DECLARATION OF RESTRICTIVE COVENANT (hereinafter "Declaration") is made by Duke Energy Florida, LLC, a Florida limited liability company and its successors and assigns (hereinafter "GRANTOR"), and the Florida Department of Environmental Protection and its successors and assigns (hereinafter "FDEP"). This Declaration is neither extinguished nor affected by the Marketable Record Title Act pursuant to section 712.03, Florida Statutes (F.S.).

### **RECITALS**

A. GRANTOR is the fee simple owner of that certain real property situated in the County of Osceola, State of Florida, more particularly described in Exhibit "A" attached hereto and made a part hereof (hereinafter the "Property"). The portion of the Property that is being restricted by this Declaration is more particularly described in Exhibit "B" attached hereto and made a part hereof (hereinafter the "Restricted Property").

B. The FDEP Facility Identification Number for the Restricted Property is 498840909. The facility name at the time of this Declaration is the Intercession City Combustion Turbine Plant. This Declaration addresses the discharge that was discovered on January 22, 1990.

C. The discharge was discovered during a general site assessment conducted on all underground petroleum storage systems at the Restricted Property between 1989 and 1990. The discharge of petroleum product on the Restricted Property is documented in the following reports that are incorporated by reference:

1. *Supplemental Site Assessment Report dated September 9, 2005, submitted by QORE, Inc.*
2. *Task 5 Supplemental Site Assessment Report dated April 5, 2021, submitted by Golder Associates Inc.*
3. *Task 2 Deliverable for: Intercession City Combustion Turbine Plant dated January 8, 2020, submitted by HSW Engineering, Inc.*

D. The reports noted in Recital C set forth the nature and extent of the contamination that is located on the Restricted Property. These reports confirm that contaminated soil as defined by Chapter 62-780, Florida Administrative Code (F.A.C.), exists on the Restricted Property.

E. It is GRANTOR's and FDEP's intent that the restrictions in this Declaration reduce or eliminate the risk of exposure of users or occupants of the Restricted Property and the environment to the contaminants and to reduce or eliminate the threat of migration of the contaminants.

F. FDEP has agreed to issue a Conditional Site Rehabilitation Completion Order (hereinafter "Order") upon recordation of this Declaration. FDEP can unilaterally revoke the Order if the conditions of this Declaration or other requirements of the Order are not met. Additionally, if concentrations of petroleum products' chemicals of concern increase above the levels approved in the Order, or if a subsequent discharge occurs at the Restricted Property, FDEP may require site rehabilitation to reduce concentrations of contamination to the levels allowed by the applicable FDEP rules. The Order relating to FDEP Facility No. 498840909 can be found by contacting the appropriate FDEP district office or Tallahassee program area.

G. GRANTOR deems it desirable and in the best interest of all present and future owners of the Restricted Property that an Order be obtained and that the Restricted Property be held subject to certain restrictions and engineering controls, all of which are more particularly hereinafter set forth.

NOW, THEREFORE, to induce FDEP to issue the Order and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged by each of the undersigned parties, GRANTOR agrees as follows:

1. The foregoing recitals are true and correct and are incorporated herein by reference.
2. GRANTOR hereby imposes on the Restricted Property the following restrictions and requirements, as depicted on Exhibit B:

a. Soil Engineering Control. The "Area of Soil Restriction" as located on the Restricted Property and shown on Exhibit B shall be permanently covered and maintained with an impermeable material that prevents human exposure and prevents water infiltration, in accordance with the layout of such areas as shown in Exhibit B (hereinafter referred to as "the Engineering Control"). An Engineering Control Maintenance Plan (ECMP) has been approved by FDEP. The ECMP specifies the frequency of inspections and monitoring for the Engineering Control and the criteria for determining when the Engineering Control has failed. The Engineering Control shall be maintained in accordance with the ECMP. The ECMP may be amended upon the prior written consent of FDEP. The ECMP, as amended, relating to FDEP Facility No. 498840909 can be obtained by contacting the appropriate FDEP district office or Tallahassee program area.

b. Excavation and Construction. Excavation and construction below the Engineering Control is not prohibited on the Restricted Property provided any contaminated soils that are excavated are either: 1) placed back into the excavation and the Engineering Controls are reconstructed or 2) are removed and properly disposed of pursuant to Chapter 62-780, F.A.C., and any other applicable local, state, and federal requirements. Nothing herein shall limit any other legal requirements regarding construction methods and precautions that must be taken to minimize risk of exposure while conducting work in contaminated areas.

3. All references to "GRANTOR" and "FDEP" shall also mean and refer to their respective legal representatives, successors and assigns.

4. For the purpose of monitoring the restrictions contained herein, FDEP is hereby granted a right of entry upon, over and through, and access to the Restricted Property at reasonable times and with reasonable notice to GRANTOR. Access to the Restricted Property is granted by providing access to the Property located at 6525 Osceola Polk Line Rd, Davenport, FL 33896, and as defined in Exhibit A.

5. It is the intention of GRANTOR that this Declaration shall touch and concern the Restricted Property, run with the land and with the title to the Restricted Property, and shall apply to and be binding upon and inure to the benefit of GRANTOR and FDEP, and to any and all parties hereafter having any right, title or interest in the Restricted Property or any part thereof. FDEP may enforce the terms and conditions of this Declaration by injunctive relief and other appropriate available legal remedies. Any forbearance on behalf of FDEP to exercise its right in the event of the failure of GRANTOR to comply with the provisions of this Declaration shall not be deemed or construed to be a waiver of FDEP's rights hereunder. This Declaration shall continue in perpetuity, unless otherwise modified in writing by GRANTOR and FDEP as provided in paragraph 7 below. These restrictions may also be enforced in a court of competent jurisdiction by any other person, firm, corporation, or governmental agency that is substantially benefited by this Declaration. If GRANTOR does not or will not be able to

comply with any or all of the provisions of this Declaration, GRANTOR shall notify FDEP in writing within three (3) calendar days. Additionally, GRANTOR shall notify FDEP thirty (30) days prior to any conveyance or sale, granting or transferring the Restricted Property or portion thereof, to any heirs, successors, assigns or grantees, including, without limitation, the conveyance of any security interest in said Restricted Property.

6. In order to ensure the perpetual nature of this Declaration, GRANTOR shall record this Declaration, and GRANTOR shall reference these restrictions in any subsequent lease or deed of conveyance, including the recording book and page of record of this Declaration. Furthermore, prior to the entry into a landlord-tenant relationship with respect to the Restricted Property, GRANTOR agrees to notify in writing all proposed tenants of the Restricted Property of the existence and contents of this Declaration. Without limiting the generality of paragraph 3 above, it is the intention of the parties that if GRANTOR has conveyed the Restricted Property, the GRANTOR's successors and assigns shall be required to perform such notification.

7. This Declaration is binding until a release is executed by the FDEP Secretary (or designee) and is recorded in the public records of the county in which the land is located. To receive prior approval from the FDEP to remove any requirement herein, cleanup target levels established pursuant to Florida Statutes and FDEP rules must be achieved. This Declaration may be modified in writing only. Any subsequent amendments must be executed by both GRANTOR and FDEP and be recorded by GRANTOR as an amendment hereto.

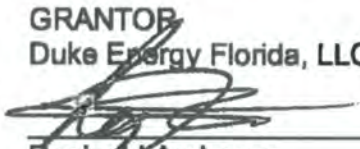

8. If any provision of this Declaration is held to be invalid by any court of competent jurisdiction, the invalidity of that provision shall not affect the validity of any other provisions of the Declaration. All such other provisions shall continue unimpaired in full force and effect.

9. GRANTOR covenants and represents that on the date of execution of this Declaration that GRANTOR is seized of the Restricted Property in fee simple and has good right to create, establish, and impose this Declaration on the use of the Restricted Property.

**Re: Semi-Annual Natural Attenuation Monitoring Report (March 2016 Sampling Event)  
Duke Energy Intercession City Combustion Turbine Plant  
6526 Osceola Polk Line Road, Intercession City, Osceola County, Florida  
Discharge Date: July 18, 2006, FDEP Facility ID No. 498840909**

Dear Ms. Volpe:

Geosyntec Consultants, Inc. (Geosyntec) has prepared this Annual Natural Attenuation Monitoring (NAM) Report for the Duke Energy Intercession City Combustion Turbine Plant located at 6526 Osceola Polk Line Road in Intercession City, Osceola County, Florida (the "site"). Geosyntec is submitting this report on behalf of Duke Energy (Duke) to the Orange County Environmental Protection Division (OCEPD). This report summarizes the results of the NAM sampling event completed on March 3, 2016.

## **BACKGROUND AND SUMMARY OF PREVIOUS INVESTIGATIONS**

Duke operates the Intercession City Plant in Intercession City, Florida. The facility began commercial operations in 1974. Twelve combustion turbine peak-usage electrical generating units are located at the facility.

During the week of June 5, 2006, a fuel oil leak was observed at a piping flange for the overflow tank of Peaker Unit 6A (**Figure 1**). Duke requested that QORE (now S&ME, Inc.) conduct assessment activities to assess whether constituents of concern related to this leak were released into the environment. Soil assessment and source removal activities were conducted as described in QORE's Source Removal and Site Assessment Report dated January 12, 2007. Groundwater assessment activities, including monitor well installation and groundwater quality sampling, were presented in QORE's Ground Water Assessment Report dated March 29, 2007. The report contained a recommendation to conduct NAM.

The locations of the monitor wells for the Peaker Unit 6A area are shown on **Figure 2**. The analytical results for previous NAM sampling and analysis (through July 2015) indicate that concentrations of total recoverable petroleum hydrocarbons (TRPH) were at concentrations above the Groundwater Cleanup Target Level (GCTL) established in Chapter 62-777, Florida Administrative Code (F.A.C.) in the groundwater samples collected from monitor well MW-A in all sampling events since August 2007. Additionally, benzene was identified in groundwater samples collected from monitor well MW-A at concentrations above the GCTL of 1 Micrograms per liter ( $\mu\text{g/L}$ ) in most sampling events from January 2007 through July 2010; however, benzene concentrations in groundwater samples collected from monitor well MW-A remained below the GCTL from January 2011 through January 2014. Based on these data, the analysis of benzene in groundwater samples collected from monitor well MW-A was discontinued in July 2014.

Naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene have been reported in groundwater samples collected from monitor well MW-A at concentrations above respective GCTLs in all sampling events since polycyclic aromatic hydrocarbons (PAHs) were added to the sampling plan beginning in January 2012.

Concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tert-butyl ether (MTBE), TRPH, and PAHs remained below their respective GCTLs or target practical quantification limits (PQLs) in groundwater samples collected from monitor wells MW-B and MW-D for all sampling events through July 2013. Since no BTEX, TRPH, or PAH compounds were detected in groundwater samples collected from wells MW-B and MW-D, monitor wells MW-B and MW-D were removed from the sampling plan following the July 2013 sampling event.

Concentrations of BTEX/MTBE and TRPH compounds in groundwater samples collected from monitor well MW-C have remained below GCTLs or target PQLs in all sampling events since January 2007. Concentrations of PAHs have remained below GCTLs in all sampling events since these compounds were added to the sampling plan beginning in January 2012. Analysis of groundwater samples collected from monitor well MW-C for BTEX ceased in January 2014. Sampling of ground water from monitor well MW-C for PAH analyses has continued under the NAM to provide a down-gradient compliance point.

Based on the historical analytical results, S&ME made a recommendation in the August 25, 2010 report that NAM continue at the site on a semi-annual basis rather than quarterly basis. The Polk County Health Department agreed with the recommendation in a letter dated September 8, 2010. NAM has continued on a semi-annual basis since that time.

Free product has not been observed in the monitor wells at the site.

This report describes the results of the March 2015 semi-annual NAM event.

## MONITORING WELL SAMPLING

### Groundwater Elevation and Flow Direction

Geosyntec measured the depth-to-water (DTW) in monitoring wells MW-A, MW-B, MW-C, and MW-D upon arrival and during groundwater sampling on March 3, 2016. The water levels were measured to the nearest 0.01 foot using an electronic water level meter, and the DTW measurements collected upon arrival at the site were used to calculate groundwater elevations included in **Table 1**.

In March 2016, the DTW ranged from 2.45 to 2.98 feet below land surface. Data from the March 2016 sampling event indicated that groundwater in the shallow surficial aquifer was generally flowing to the north towards MW-C, which was consistent with historical groundwater flow conditions reported at the site. The groundwater elevations and flow direction for the March 2016 sampling event are shown on **Figure 3**.

### Groundwater Quality Sampling

During this semi-annual reporting period, Geosyntec collected groundwater samples from monitoring wells MW-A and MW-C on March 3, 2016. The sampling activities were performed in general accordance with the Florida Department of Environmental Protection Standard Operating Procedures for Field Activities. The groundwater samples were submitted to TestAmerica Laboratories, Inc. in Tampa, Florida and analyzed for TRPH by the FL-PRO method and PAH by United States Environmental Protection Agency (USEPA) Method 8270D LL (Low Level). Groundwater analytical results for the March 2016 sampling event are summarized in **Table 2**. Field documentation is included in **Attachment A**, and the laboratory analytical report is included in **Attachment B**.

Laboratory results for the March 2016 sampling event indicated the concentrations of TRPH (5,100 µg/L), naphthalene (140 µg/L), 2-methylnaphthalene (92 µg/L), and 1-methylnaphthalene (86 µg/L) in MW-A exceeded GCTLs but were below Natural Attenuation Default Concentrations (NADCs). The concentrations of all other analyzed constituents in MW-A were below GCTLs. In addition, the concentrations of analyzed constituents in MW-C were below GCTLs.

A review of the historical data indicated that the concentrations of constituents above GCTLs in MW-A decreased since the previous sampling event in July 2015, and they are within the range of previously reported sampling results. The current and previous data indicated that free

product is not present and the area of affected groundwater is confined to the site, stable and/or shrinking, and less than 0.25 acres.

### **Quality Assurance/Quality Control**

Geosyntec reviewed the laboratory data and noted the following, which may have also been discussed in the case narrative of the laboratory report.

- The sample identification on the chain of custody (COC) did not match the sample containers. The COC included MW-A and MW-B, and the sample containers were labeled MW-A and MW-C. The laboratory was instructed to log the sample as MW-C.
- The method blank for preparation batch 400-296854 and analytical batch 400-296846 contained dibenz(a,h)anthracene and anthracene above the method detection limit. These target analytes were not detected in the associated samples; therefore, re-extraction and/or re-analysis of samples was not performed.
- The following samples were diluted to bring the concentration of naphthalene within the calibration range: MW-A (660-72407-1) and DUP (660-72407-3). Elevated reporting limits are provided for naphthalene.
- A matrix spike/matrix spike duplicate associated with FL-PRO analytical batch 400-296667 was not performed due to insufficient sample volume.
- The laboratory method detection limit (0.050 µg/L) and practical quantitation limit (0.20 µg/L) for dibenz(a,h)anthracene were above the GCTL of 0.005 µg/L. The samples were analyzed using USEPA Method 8270D LL, and the detection limits represent lowest achievable levels and meet the data quality objectives.

### **SUMMARY AND PATH FOWARD**

The laboratory results from the March 2016 sampling event indicated that TRPH, naphthalene, 2-methylnaphthalene, and 1-methylnaphthalene were detected in MW-A at concentrations above GCTLs and below NADCs. The current and historical groundwater data also indicated that the site may meet the requirements for No Further Action (NFA) with Controls under Risk Management Option II established in Chapter 62-780.680(2), F.A.C. Geosyntec will review historical documents to evaluate if NFA with Controls is an appropriate path forward for this site, and, if so, submit a proposal for NFA with Controls to OCEPD.

**RE: TASK 5 SUPPLEMENTAL SITE ASSESSMENT REPORT (SOIL SAMPLING)  
DUKE ENERGY FLORIDA – INTERCESSION CITY COMBUSTION TURBINE PLANT  
6525 OSCEOLA POLK LINE ROAD  
DAVENPORT, OSCEOLA COUNTY, FLORIDA  
MFMP PURCHASE ORDER: B03493 / B41FEF (CONTINUATION PO)  
FACILITY IDENTIFICATION NUMBER: 49-8840909  
DISCHARGE DATE: JANUARY 22, 1990 (DRF #2)**

Dear Ms. Milinkovich:

Golder Associates Inc. (Golder) is submitting this Task 5 Milestone Completion Report to the Florida Department of Environmental Protection (FDEP) for the Duke Energy Florida, LLC (Duke) Intercession City Combustion Turbine Plant facility referenced above (the site). This report has been prepared in accordance with the scope of work associated with purchase order (PO) B03493/B41FEF, and subsequent modifications. Note that PO B03493 was closed, and the remaining tasks were transferred to the continuation PO B41FEF.

The site is a power plant facility located at 6525 Osceola Polk Line Road, in Davenport, Osceola County, Florida. There are two open petroleum discharges at the site. Closure of the July 14, 2006 discharge ("DRF #5") is in progress under another petroleum program contractor. This report covers supplemental soil and groundwater assessment activities for the January 22, 1990 ("DRF #2") discharge area, covering Peaker Units 1 through 5, as shown on Figure 1.

## **BACKGROUND**

The discharge was discovered during a general site assessment conducted on all underground petroleum storage systems at the site. As part of the site assessment, 17 temporary monitoring wells were installed in December 1989, around 11 drain tanks and the associated drain fields in the vicinity of Peaker Units 1 through 5. Groundwater from the wells was sampled in January 1990, and the laboratory results indicated petroleum impacts in samples from five wells. The date of the discharge is noted as January 22, 1990, which is the date the laboratory

---

Golder Associates Inc.  
9428 Baymeadows Road, Suite 400 Jacksonville, FL 32256 USA

T: +1 904 363-3430 +1 904 363-3445

results were received. The Discharge Reporting Form (DRF) notes the discharge as diesel, with the cause, volume, and location of the release noted as unknown. Tank registration records indicate that 15 150-gallon drain tanks (underground storage tanks) in the area of Peaker Units 1 through 6 were removed and replaced with 12 183-gallon underground storage tanks in May 1993.

As reported in a Supplemental Site Assessment Report, dated September 9, 2005, Qore Property Sciences (Qore) conducted supplemental site assessment activities, including soil sampling, monitoring well installations (MW-1 to MW-5), and groundwater sampling. Petroleum impacts to soil were limited to the boring associated with monitoring well MW-2, and included concentrations of naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene in exceedance of leachability soil cleanup target levels (SCTLs); and concentrations of two individual total recoverable petroleum hydrocarbons (TRPH) fractions in exceedance of the residential direct exposure SCTLs. Petroleum impacts to groundwater were also limited to MW-2, and included concentrations of TRPHs, naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene that exceeded groundwater cleanup target levels (GCTLs). The concentration of naphthalene in the sample from MW-2 also exceeded the natural attenuation default concentration.

Qore and S&ME, Inc. conducted quarterly Natural Attenuation Monitoring (NAM) between April 2006 and October 2007. During this time, petroleum impacts remained in samples collected from MW-2, with intermittent TRPH GCTL exceedances associated with MW-3. Monitoring was halted after October 2007 due to changes in State funding levels. S&ME resumed NAM sampling in May 2012. Free product was detected in MW-2 during the May 2012 (0.21 feet) and October 2012 (0.02 feet) monitoring events. It should be noted that the water table during the May 2012 monitoring event was anomalously low.

S&ME submitted an Interim Remedial Action Report, dated July 1, 2013, detailing supplemental assessment activities. In June 2013, S&ME conducted additional assessment activities, including soil sampling, and installation and sampling of monitoring wells MW-6, MW-7, and MW-8 to better delineate the groundwater impacts reported at MW-2. MW-6 is upgradient of MW-2; and MW-7 and MW-8 are downgradient of MW-2. No petroleum constituents were reported above cleanup target levels in soil or groundwater samples collected during the July 2013 event. S&ME proposed over-pumping of MW-2 using a vacuum truck to address the free product and petroleum-impacted groundwater.

S&ME submitted a Limited Scope Remedial Action Plan (LSRAP), dated September 27, 2013. The LSRAP proposed additional soil sampling in the vicinity of MW-2, and over-pumping of MW-2 using a vacuum truck. In a letter dated December 13, 2013, the Florida Department of Health in Polk County Petroleum Cleanup Program approved the LSRAP but did not authorize the work.

The January 22, 1990 discharge was included in Performance Based Advanced Cleanup contract AC397. Assessment of the discharge was initially authorized under PO B03493. Golder conducted supplemental soil and groundwater assessment activities in January 2018, as reported in the Supplemental Site Assessment Report dated March 19, 2018. Golder collected soil samples in the vicinity of MW-2. Soil results indicated exceedances of leachability SCTLs for naphthalene, 1-methylnaphthalene, and 2-methylnaphthalene; and exceedances of leachability and/or direct exposure SCTLs for TRPHs and several petroleum hydrocarbon fractions. Petroleum impacts to groundwater were limited to monitoring well MW-2, where concentrations of 1-methylnaphthalene,

2-methylnaphthalene, and benzo(a)anthracene exceeded the GCTLs, but were below natural attenuation default concentrations.

Tasks 1 through 3, (health and safety plan and supplemental site assessment described above), were completed under PO B03493. PO B03493 was closed, and the continuation PO B41FEF was issued on November 14, 2018 during completion of Task 4 (groundwater monitoring to demonstrate stable/shrinking plume).

Golder conducted four quarters of Natural Attenuation Monitoring (NAM) groundwater monitoring between May 2018 and March 2019, as reported in the Groundwater Monitoring Report (Stable/Shrinking Plume) dated September 27, 2019. Free product was detected in monitoring well MW-2 at a thickness of 0.10-foot during the May 2018 event but was not detected during the subsequent three events. In addition, free product was not observed during sampling of the other site wells between May 2018 and March 2019.

TRPH concentrations exceeded the GCTL of 5,000 micrograms per liter in the August 2018 groundwater sample collected from MW-8 (6,800 micrograms per liter) but were below the GCTL in the December 2018 and March 2019 samples from this well. TRPH concentrations were below the GCTL in the groundwater samples collected from the remaining wells (MW-2, MW-3, MW-6 and MW-7) between May 2018 and March 2019.

Several polycyclic aromatic hydrocarbons (PAHs) were detected in samples from MW-2, MW-7 and MW-8 at concentrations below their respective GCTLs between May 2018 and March 2019. PAHs were not detected in samples from MW-3 and MW-6 during this time period.

BTEX compounds and MTBE were not detected in the May and August 2018 groundwater samples. Groundwater samples collected during subsequent events were not analyzed for these constituents.

As of the March 2019 monitoring event, there are at least two consecutive clean groundwater sample results for petroleum constituents for all of the monitoring wells associated with the January 22, 1990 discharge. Golder proposed No Further Action for the January 22, 1990 discharge and closure under Risk Management Option (RMO)-II. Golder recommended implementation of institutional controls to include restriction of the property to commercial/industrial use, implementation of an engineering control (EC) and groundwater use restrictions. In a review letter dated January 15, 2020, FDEP agreed with the Golder recommendations to move forward with Milestone #5 (RMO II/III Closure), implement institutional controls, and submit an engineering control maintenance plan for the existing asphalt cover.

During a Microsoft Teams call on December 17, 2020 between FDEP, Duke and Golder, FDEP expressed concern that the soil contamination was not delineated and requested additional soil sampling. FDEP also expressed concern regarding a gravel area north of MW-2 that was not included within the EC boundary. Golder completed the requested soil sampling in accordance with change order #5 under PO B41FEF. This report summarizes field procedures and analytical data for the supplemental soil sampling conducted in February 2021.

## **TASK 5 SUPPLEMENTAL SOIL SAMPLING**

Golder conducted soil assessment activities on February 10, 2021 west of the previous samples Golder collected in the vicinity of MW-2 in January 2018. Prior to subsurface disturbance on February 10, 2021, Golder provided

oversight for a private utility locate by Geoview, Inc. Underground utilities were located and marked. Golder advanced a total of six hand auger borings (GSB-9 to GSB-14).

The hand auger borings were advanced to a depth of approximately 2 feet below ground surface. The water table was not encountered, but historical depths to water range from 1.4 to 6.2 feet below top of casing in monitoring wells in the vicinity of the boring locations. Field soil samples were collected at 1-foot vertical intervals. Soil sample headspace was screened on site using an organic vapor analyzer (OVA) equipped with a photoionization detector. The soil samples were observed for visual impacts, examined for odor, and OVA data were recorded. The OVA readings were all below 1 part per million (ppm), and no odors or staining were observed. Soil boring logs are included in Attachment A, and soil OVA data and lithologic descriptions are summarized in Table 1. The boring locations and OVA results are shown on Figure 2.

A total of six soil samples were collected for laboratory analysis. The top 1-foot of the borings consisted primarily of asphalt and limerock road base; therefore, the samples were collected at the 1 to 2-foot below ground surface interval in each of the six borings (GSB-9 to GSB-14).

Soil samples were submitted to SGS North America Inc. for analysis of polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270; and TRPHs using the FL-PRO Method. The analyses for the samples from GSB-12, GSB-13, and GSB-14 were placed on hold pending the results from the samples from GSB-9, GSB-10, and GSB-11. Golder also collected additional sample for TRPH speciation and synthetic precipitation leaching procedure for PAHs and placed these analyses on hold.

The concentrations of TRPHs in the February 2021 soil samples were below applicable SCTLs and ranged from 8.35 milligrams per kilogram (mg/kg) to 15.1 mg/kg. Several PAHs were detected at concentrations below the applicable SCTLs. Given that the initial soil analytical results from GSB-9, GSB-10 and GSB-11 were below SCTLs, the hold samples and analyses were not run. Analytical results from the soil sampling event are presented in Tables 2 to 4. Historical soil TRPH speciation data are included in Table 5 for reference. The laboratory analytical report is included in Attachment B.

## CONCLUSIONS AND RECOMMENDATIONS

Golder has completed the supplemental soil assessment activities outlined in change order #5 under PO B41FEF. Given that the February 2021 soil analytical results were below SCTLs, the soil petroleum contamination plume is delineated.

### Proposed Engineering Control and Soil Restriction Boundary

Golder proposes the EC boundary shown on Figure 3 to address the soil with petroleum constituents reported in exceedance of SCTLs. The overall proposed EC is approximately 3,437 square feet and encompasses two types of ground cover: 1) Peaker Units 3A and 3B and the underlying concrete slab (impervious), and 2) impervious asphalt pavement south of Peaker Units 3A and 3B. A pervious gravel area is present south of Peaker Unit 3B and between the peaker unit and the asphalt pavement. Golder proposes that Duke maintain the current layout within the EC boundary. Golder also proposes to exclude the gravel area from the EC.

Golder initially proposed EC boundary described above to FDEP for review on June 9, 2020. During the Teams call with FDEP, Duke, and Golder on December 17, 2020, FDEP expressed concern with leaving this area pervious, and excluding it from the EC.

While onsite for the soil sampling on February 10, 2021, Golder discussed with Duke the feasibility of paving the gravel area. Due to the presence of an above-ground fuel line and a drain tank within the gravel area, there would be significant safety concerns associated with paving this area, in addition to the potential for a release should the fuel line or drain tank become damaged during the paving process. A photograph of the gravel area showing the fuel lines and drain tank is included for reference in Attachment C.

Golder acknowledges that the gravel area is pervious and is adjacent to soil with reported leachability SCTL exceedances in addition to the direct exposure SCTL exceedances. Based on a photograph from historical inspection records in Oculus, and included in Attachment C, the gravel area has been present since at least 1993. As such, the soil contamination has had the opportunity to leach into the groundwater for over 25 years, resulting in the current groundwater conditions. Groundwater monitoring including monitoring wells in this vicinity has been conducted since 2005. Under these conditions, GCTL exceedances have historically been reported for TRPHs, naphthalene, 1-methylnaphthalene and 2-methylnaphthalene. The concentrations of these constituents in groundwater have decreased overall and stabilized, and petroleum constituents of concern were below GCTLs in all groundwater samples collected over the two most recent, consecutive monitoring events. The site in its current layout thus meets the criteria of Florida Administrative Code (62-780.680(2)(b)2.f.):

*"It has been demonstrated to the Department by a minimum of one year of groundwater monitoring data and, if applicable, fate and transport modeling results that, based upon the site-specific conditions, contaminants will not leach into the groundwater at concentrations that exceed the appropriate groundwater CTLs established pursuant to paragraph 62-780.680(1)(c), F.A.C., or if the groundwater is already contaminated, at concentrations that exceed the alternative groundwater CTLs established pursuant to paragraph 62-780.680(2)(c), F.A.C., and, if applicable, the appropriate surface water CTLs pursuant to paragraph 62-780.680(1)(d), F.A.C."*

Historical groundwater data through March 2019 are included for reference in Tables 6 to 8.

As an alternative to paving the gravel area and inclusion in the EC, Golder proposes instead to implement soil restrictions regarding proper management of excavated soils, i.e., soil restrictions would be implemented for the gravel area in addition to the area covered by the EC. The proposed soil restriction boundary is shown on Figure 3. In the soil data reported to date, the only direct exposure exceedances were for the C<sub>11</sub>-C<sub>22</sub> aromatics hydrocarbon fraction (maximum reported concentration of 4,200 mg/kg), and the C<sub>9</sub>-C<sub>18</sub> aliphatics hydrocarbon fraction (maximum reported concentration of 5,480 mg/kg). These concentrations were well below the commercial/industrial direct exposure SCTLs of 15,000 mg/kg and 21,000 mg/kg, respectively.

### Groundwater Restrictions

Although Golder previously proposed groundwater restrictions for the site, upon further review of the data, these restrictions do not appear to be necessary. The groundwater analytical results indicate that petroleum constituents of concern were below GCTLs in all groundwater samples collected over the two most recent, consecutive

monitoring events. Golder therefore proposes not to include groundwater restrictions as part of the institutional controls.

Golder proposes to schedule a call with FDEP to discuss the proposed restrictions, and to address any further concerns before proceeding with the survey of the restriction boundaries and completion of the engineering control maintenance plan.

Sincerely,

**Golder Associates Inc.**

RE: Disaster Debris Management Sites (DDMS) Closure - Dorian

Dear Randy Stafford,

The Department has confirmed the closure of the disaster debris management site (DDMS) at the following location:

WACS ID: 99959  
17-92 At Old Tampa Highway  
Sr 17-92 & Polk/Osceola County Line Road, Osceola County  
Lat 28:15:52.92 / Long 81:32:4.92  
Waste Planned for Management: Yard Trash

Based on an inspection, Department personnel observed that all debris had been removed and there was no evidence of a pollutant release. The Department has not taken nor reviewed any environmental sampling results for this site.

In accordance with the Amended Consolidated Emergency Final Order OGC No. 19-1495 (the Order), which was executed on 08/29/2019, the Department declares this site to be properly closed as of 09/27/2019. Waste materials are no longer authorized to be stored or processed on this site.

For future reference, the Department has also prepared a guidance document on the establishment, operation and closure of a DDMS for disaster debris. This guidance includes recommended practices, which you are expected to follow as much as practicable, as well as additional requirements from the Order. A copy of this guidance document is available on the DEP website at <https://floridadep.gov/waste/permitting-compliance-assistance/documents/guidance-establishment-operation-and-closure>. This guidance is not a substitute for federal requirements and guidance, including those from the Federal Emergency Management Agency (FEMA).

If you have any questions or comments on this letter, please feel free to contact Anthony Lafon by E-mail at [dep\\_cd@dep.state.fl.us](mailto:dep_cd@dep.state.fl.us) or by phone at (407) 897-2923. In order to provide better service to you, the Department is using electronic documents as much as possible. Please provide your E-mail address when replying.

Sincerely,

09/27/2019

Subject: Site Rehabilitation Completion Order  
Circle K # 7226  
1608 Shepard Lane  
Intercession City, Osceola County  
FDEP Facility ID# 498513740

Dear Mr. Belin:

The Bureau of Petroleum Storage Systems has reviewed the Natural Attenuation Monitoring Report and No Further Action Proposal (NFAP) dated August 28, 2001 (received August 31, 2001) and the Monitoring Well Abandonment Report dated November 13, 2001 (received November 16, 2001), prepared and submitted by ATC Associates, Inc. for the petroleum product discharge discovered on November 28, 1988, at this site. Documentation submitted with the NFAP confirms that criteria set forth in Rule 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. The NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the site for petroleum product contamination associated with the discharge listed above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the site, the Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the NFAP or otherwise allowed by Chapter 62-770, F.A.C.

FDEP Facility No. 4980513740  
FDEP Work Order No. 2001-95-0458-0  
ATC Project No. 05-16564-0386

**RECEIVED BY**

**AUG 31 2001**

**TEAM 5**

**ENTERED**

Dear Mr. Marks:

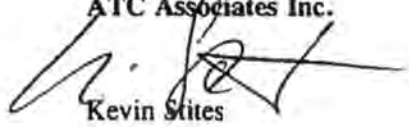

ATC Associates Inc. (ATC) completed quarter two of the natural attenuation monitoring specified in the above-referenced Florida Department of Environmental Protection (FDEP) Pre-Approval Work Order. Water level data were obtained on July 24, 2001 from wells MW-2, MW-3, MW-4, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, MW-16 and DMW-7. A site map is presented as Figure 1. The water level measurements and calculated water table elevations are summarized in Table 1. A groundwater contour map is presented as Figure 2. Groundwater flow in the shallow zone was interpreted to be to the south.

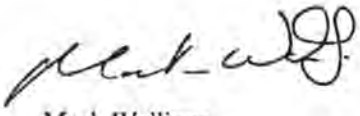

Groundwater samples were collected from monitoring wells MW-2, MW-3, MW-8, MW-9, MW-16 and DMW-7 during the site visit on July 24, 2001. Please note that the polynuclear aromatic hydrocarbons (PAHs) sample container for MW-8 was reported destroyed by the laboratory; MW-8 was therefore resampled for PAHs on July 26, 2001. The samples were analyzed for benzene, toluene, ethyl benzene, total xylenes (BTEX), MTBE, and PAHs. The laboratory report and well sampling logs are provided in Appendix A and the analytical results are summarized in Table 2. BTEX, MTBE and PAHs were not detected above Chapter 62-777, Florida Administrative Code (FAC) groundwater cleanup target levels in the samples collected from wells MW-2, MW-3, MW-8, MW-9, MW-16 and DMW-7.

Analytical data from two consecutive quarters of sampling events indicated that Groundwater Cleanup Target Levels (GCTL's) have been met. Therefore, per Chapter 62-770 (7)(b), No Further Action status for this site is appropriate. ATC recommends that natural attenuation monitoring be discontinued. Additionally, ATC recommends submitting a proposal for the abandonment of all site monitoring wells with the intent of obtaining a Site Rehabilitation Completion Order (SRCO) upon completion of the well abandonment report.

Please contact ATC at (813) 889-8960 if you have any questions regarding this report.

Sincerely,  
ATC Associates Inc.

**Existing Violations:**

Type: Violation  
Significance: Minor  
Rule: 62-761.405(1), 62-761.405(1)(a), 62-761.405(1)(b), 62-761.405(1)(c)  
Violation Text: For installation, notification not received in a timely manner.  
Explanation: Fill sumps/SW spill buckets were replaced with DW spill buckets sometime in 2018 or 2019. OCEPD was not notified in a timely manner. Circle-K was informed of the potential violation.  
Corrective Action: Provide an explanation for replacing fill sumps/SW spill buckets with DW spill buckets. Notify OCEP within 30 to 45 days and 48 to 72 hours for an installation inspection. Perform post-installation vacuum testing on DW spill buckets. Submit documentation showing corrective actions to OCEPD.

Type: Violation  
Significance: Minor  
Rule: 62-761.800(3), 62-761.800(3)(a), 62-761.800(3)(a)1., 62-761.800(3)(a)2., 62-761.800(3)(a)3.,

62-761.800(3)(a)4., 62-761.800(3)(a)5., 62-761.800(3)(a)6.

Violation Text: Closure Integrity evaluation requirements not met.

Explanation: On 05/07/18, RUL SW spill bucket failed hydro test. Fill sumps/SW spill buckets were replaced with DW spill buckets sometime in 2018 or 2019. Fill sump hydro testing prior to closure was unavailable. OCEPD did not appear to receive a CIE. Circle-K was informed of the potential violation.

Corrective Action: Provide an explanation for replacing fill sumps/SW spill buckets with DW spill buckets. Conduct a CIE and soil sampling analysis within 45 days. Provide a Closure Report within 60 days. Submit documentation showing corrective actions to OCEPD.

---

### Site Visit Comments

05/18/2022

On site with Hy-Tech for routine compliance inspection.

Site is a retail convenience store with 3 underground storage tanks.

Release detection is done using a Veeder-Root.

Liquid status printout was normal.

Overfill protection is done using flapper valves.

There were no signs of leaks at the time of the inspection.

Dispensers, hoses, nozzles, and breakaways looked good.

Testing was sent electronically.

Placard was posted.

\*\*\*Existing violations still apply.\*\*\*

Dear Ms. Metrin:

In response to your letter dated January 17, 1991; attached is additional test results which I believe satisfy your request for analytical data in accordance with EPA Method 602.

If this information does not satisfy the necessary requirements to file the Closure Report please advise me. Also to clarify, the site in question was not an old gas station. It was a food processing plant and the tanks in question held diesel fuel only.

If you have any questions please contact me.

Sincerely,

#### 4.0 CHEMICAL ANALYSIS

##### 4.1 METHODOLOGY

The groundwater samples were analyzed for the following parameters:

- o EPA Method 601
- o EPA Method 602
- o Florida Primary Drinking Water Standards Metals (inorganics)

##### 4.2 ANALYTICAL RESULTS

The samples were analyzed by Orlando Laboratories, Inc. and the complete laboratory results are presented in Appendix B. The parameters analyzed by EPA methods 601 and 602 were all below their respective detection limits. Several of the primary metals (inorganics) were above the Florida Primary Drinking Standard Maximum Contaminant Level (MCL). The significant results are presented in Table 1. The level of arsenic in HP-1 and HP-3 are above the MCL. The level of barium in HP-3 is above the MCL. The level of chromium in all the samples except the blank are above the MCL. The level of lead in HP-1 and HP-3 are above the MCL. The level of mercury in HP-1, HP-3 and HP-4 are all above the MCL for mercury. The level of selenium in HP-3 is above the MCL.

Closure Assessment Report Review

Dear Mr. Haugen:

The Department has reviewed the Closure Assessment Report submitted for the above-referenced site. The site is described as an old gas station and there was still some gasoline in the tanks before removal. The only analytical data submitted in the report was for metals and not for EPA Method 602 as required by Chapter 17-770, Florida Administrative Code. This analysis must be submitted before the Closure Assessment Report will be adequate to meet requirements of Chapter 17-761, Florida Administrative Code.

If you have any questions, please contact me at (407) 894-7555.

Sincerely,

Deborah B. Metrin, P.G.  
Section Manager

## UNDERGROUND STORAGE TANKS CLOSURE REPORT

OWNER: Leprino Foods  
1700 Avenue B  
Kissimmee, FL 34758

D.E.R # 498520986

LOCATION: Poinciana Industrial Park

PHONE # 407 870-9900

The above facilities tanks were closed in place due to the facility not being used as a gas station any more.

These tanks were abandoned in place on Sept. 20 1990 in accordance with criteria set forth in FAC 17-770 and DER 17-761-800.

\* NOTE \* The following procedures were observed:

- \* Access hole cut through existing pavement and into tank.
- \* All lines into tank drained and disconnected and capped.
- \* All liquids and sludges removed from tanks and disposed off.
- \* Tanks purged of all flammable vapors.
- \* Introduction of inert material (PERMA FILL FOAM).
- \* Pavement surface replaced above access hole.

1. Site assessment was preformed by S&ME, Inc.  
(see exhibit A)

2. Closure assessment:

Tanks opened and cleaned by: Alan Chemical Inc.  
Lic. Cert.# PC C049503.

See exhibit B (site diagram, certificate of work preformed, type of inert material used.

11. Is there a surface water body within 1/4 mile radius of the site? If yes, indicate distance: SEE SITE LOCATION MAP. ON TEST RESULTS

12. A detailed drawing or sketch of the facility that includes the storage system location, monitoring wells, buildings, storm drains, sample locations, and dispenser locations must accompany this form.

13. If a facility has a pollutant storage tank system that has both gasoline and kerosene/diesel stored on site, both EPA Method 602 and EPA Method 610 must be performed on the ground water samples obtained.

14. Amount of soils removed and receipt of proper disposal

15. If yes is answered to any one of questions 5-9, a Discharge Reporting Form 17-761.900(1) indicating a suspected release shall be submitted to the Department within one working day.

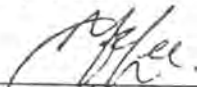

16. A copy of this form and any attachments must be submitted to the Department's district office in your area and to the locally administered program office under contract with the Department within 60 days of completion of tank removal or filling a tank with an inert material.

Title of Person Performing Assessment

State Ground Water Target Levels That Affect A  
Pollutant Storage Tank System Closure Assessment

State ground water target levels are as follows:

1. For gasoline (EPA Method 602):

a. Benzene 1 ug/l

b. Total VOA 50 ug/l

- Benzene
- Toluene
- Total Xylenes
- Ethylbenzene

c. Methyl Test-Butyl Ether (MTBE) 50 ug/l

2. For kerosene/diesel (EPA Method 610):

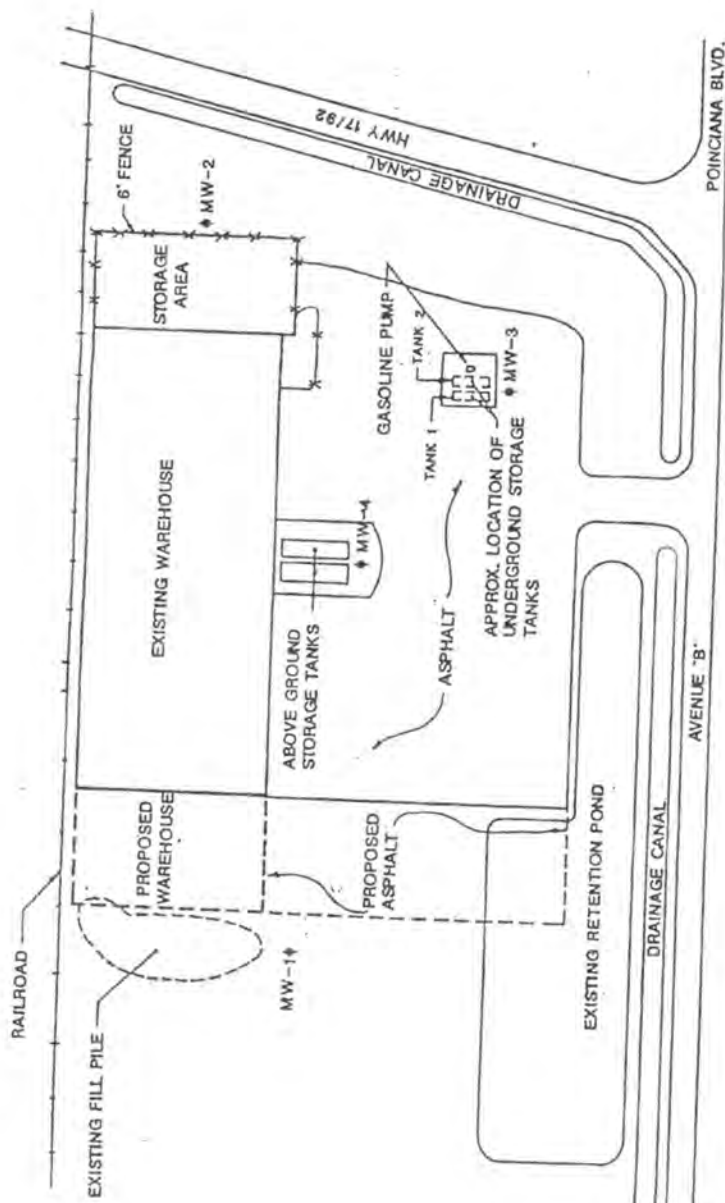

a. Polynuclear Aromatic (Best achievable detection Hydrocarbons (PAHS) limit, 10 ug/l maximum)

Type: Violation

Significance: SNC-B

Rule: 62-762.501(2)(e), 62-762.501(2)(e)1., 62-762.501(2)(e)2., 62-762.501(2)(e)2.a., 62-762.501(2)(e)2.b., 62-762.501(2)(e)2.c., 62-762.501(2)(e)2.d., 62-762.501(2)(e)3.

Violation Text: Failure to provide approved overfill protection for shop fabricated tank systems.

Explanation: Annual operability testing from 2017 & 2018 was unavailable. SVC Manufacturing, Inc. was informed of the potential violation.

Corrective Action: Perform annual operability testing on the high fuel alarm/overfill alarm box. Testing shall occur annually not exceeding 12 months. Submit documentation showing corrective actions to the Orange County Environmental Protection Division (OCEPD). Maintain testing records at the facility for three years.

---

Type: Violation

Significance: Minor

Rule: 62-762.601(7)

Violation Text: Shop fabricated storage tank system release detection devices not tested annually.

Explanation: Annual operability testing from 2017 & 2018 was unavailable. SVC Manufacturing, Inc. was informed of the potential violation.

Corrective Action: Perform annual operability testing on the rupture alarm. Testing shall occur annually not exceeding 12 months. Submit documentation showing corrective actions to the Orange County Environmental Protection Division

(OCEPD). Maintain testing records at the facility for three years.

---

Type: Violation

Significance: SNC-B

Rule: 62-762.601(1)(d), 62-762.601(1)(e)

Violation Text: Release detection, including visual inspections not being conducted monthly (not to exceed 35 days) for shop fabricated tank systems. For electronically monitored sumps, visual inspections not conducted every 6 months.

Explanation: Monthly visual inspections were missing three to four months each year (2016-2018). SVC Manufacturing, Inc. was informed of the potential violation.

Corrective Action: Please record monthly visual inspections not exceeding 35 days. Submit two monthly visual inspection logs to the Orange County Environmental Protection Division (OCEPD). Maintain records at the facility for three years.

#### Routine Inspection:

On site with Linette Diaz Viera (linette.diazviera@pepsico.com) to inspect an above ground storage tank (AST). Tanks 1 (2K) is a diesel (DSL) double walled (DW) steel AST. PepsiCo, Inc. is dba SVC Manufacturing, Inc.

A spill bucket provides spill containment. A high fuel level alarm and overfill alarm box provide electronic overfill protection. Designate a primary overfill protection device.

A clock gauge provides visual overfill protection. The clock gauge is secondary overfill protection, which doesn't require testing if primary overfill protection is active.

The clock gauge model is not approved by the Florida Department of Environmental Protection (FDEP). If primary overfill fails, the clock gauge must be replaced with FDEP approved equipment.

A rupture basin alarm provides electronic release detection. An annunciator panel displayed a low fuel alarm. Components could use new labeling and corrosion protection.

Financial responsibility and registration placards were consistent. Monthly inspections and annual testing records were missing and/or inconsistent. SVC Manufacturing, Inc. was informed of potential violations and concerns.

## SHORT FORM CONSENT ORDER

March 3, 2009

James Lynch, President  
SVC Manufacturing Inc  
700 Anderson Hill Road  
Purchase NY 10577

SUBJECT: Proposed Settlement in case of DEP vs. SVC Manufacturing Inc  
OGC File No.: 09-0217

Dear Mr. Lynch:

The purpose of this letter is to complete the resolution of the matter previously identified by the Department in the Warning Letter dated July 2, 2008, a copy of which is attached as Exhibit I. The corrective actions required to bring your facility into compliance have been performed. In order to resolve the matter identified in the attached Warning Letter, the Department has calculated civil penalties in the amount of \$22,859.00, along with \$500.00 to reimburse the Department costs, for a total of \$23,359.00. The civil penalty in this case includes two violations of \$2,000.00 or more.

In lieu of paying the entire civil penalty, the Department has determined that \$18,287.00 of the civil penalty may be offset through the implementation of the Pollution Prevention Project (P2 Project) that is described in Exhibit II. This amount is referred to as the "allowable amount." Respondent shall pay the remaining civil penalties of \$4,572.00 and the Department's costs of \$500.00, for a total of \$5,072.00, within 30 days of signing this letter. The payment must be made payable to the Department of Environmental Protection by cashier's check or money order and shall include the OGC File Number: 09-0217 and the notation "Ecosystems Management and Restoration Trust Fund." Payment shall be sent to the Department of Environmental Protection, 3319 Maguire Boulevard, Suite 232, Orlando, Florida 32803-3767.

As provided in the previous paragraph, the Department is giving you the option to offset the allowable amount of the civil penalty with a P2 Project, which is described in Exhibit II. This option requires that you strictly comply with the requirements and deadlines for implementing, completing, and submitting a Final Report to the Department. Upon signing this letter, you shall implement the approved P2 Project in accordance with the requirements of Exhibit II hereto. The P2 Project must be started no later than 30 days and completed no later than 60 days of your signing this letter. Your failure to timely start or complete the approved P2 Project or timely provide the Department with the Final Report will cause the P2 Project option to be forfeited and the balance of the civil penalty, \$18,287.00, shall be due within ten days of notice from the Department.

RECEIVED  
MAR 27 2009  
DEP Central Dist.

Your signing this letter constitutes your acceptance of the Department's offer to resolve this matter on these terms. If you elect to sign this letter, please return it to the Department at the address indicated above. The Department will then countersign the letter and file it with the Clerk of the Department. When the signed letter is filed with the Clerk, the letter shall constitute final agency action of the Department, which shall be enforceable pursuant to Section 120.69 and 403.121, Florida Statutes.

If you do not sign and return this letter to the Department at the District address within 10 days of receiving it, the Department will assume that you are not interested in settling this matter on the above described terms, and will proceed accordingly. None of your rights or substantial interests are determined by this letter unless you sign it and it is filed with the Department Clerk.

Sincerely,

FOR Vivian F. Garfein  
Director, Central District

FOR THE RESPONDENTS:

I, SHEILA CAPPEL on behalf of SVC-MANUFACTURING INC HEREBY  
ACCEPT THE TERMS OF THE SETTLEMENT OFFER IDENTIFIED ABOVE.

By: Sheila Cappel

SVC Manufacturing Inc – FLD984175281  
Warning Letter

Dear Mr. Lynch:

The purpose of this letter is to advise you of possible violations of law for which you may be responsible, and to seek your cooperation in resolving the matter. A hazardous waste compliance inspection was performed at your facility located at 1650 South Poinciana Boulevard, Kissimmee, on April 11, 2008 and April 22, 2008. The purpose of this inspection, conducted under the authority of Section 403.091, Florida Statutes (F.S.), and Chapter 403, Part IV, Florida Statutes, was to determine the compliance status of your facility with 40 CFR 260-268, adopted in Florida Administrative Code Chapter 62-730 and 40 CFR 279, adopted in Florida Administrative Code (F.A.C.) Chapter 62-710.

Department personnel observed possible violations of Florida Statutes and Rules regarding hazardous waste. These violations are set forth in "Summary of Potential Noncompliance Items and Recommended Corrective Actions" section of the attached inspection report.

The activities observed during the Department's field inspection and any activity at your facilities that may be contributing to violations of the above described statutes and rules should be ceased immediately. The Department has calculated penalties for the violations addressed above. The penalty work sheet is enclosed.

The Department is interested in reviewing any facts you may have that will assist in determining whether any violations have occurred and whether any penalties are appropriate. Please contact Michael Eckoff, Hazardous Waste Section, by telephone at (407) 893-3323 or by e-mail at [michael.eckoff@dep.state.fl.us](mailto:michael.eckoff@dep.state.fl.us) within 10 days of receipt of this letter to schedule an informal conference concerning resolution of this matter. You may bring anyone with you to the meeting that you feel could help resolve this matter.

This Warning Letter is part of an agency investigation preliminary to agency action in accordance with Section 120.57(4), Florida Statutes. The Department looks forward to your cooperation in completing the investigation and resolution of this matter.

Sincerely,

---

Vivian F. Garfein  
Director, Central District

9. Introduction

On April 11, 2008 Michael Eckoff, Florida Department of Environmental Protection (FDEP), accompanied by Scott Cone, Health, Safety, and Environmental Manager and Brian Tomkins, Engineering and Maintenance Manager, SVC Manufacturing Inc (SVC), inspected SVC for compliance with state and federal hazardous waste and used oil regulations.

The facility is connected to Toho Water Authority (TWA) potable water and wastewater collection systems. The facility also discharges from an on-site industrial wastewater treatment plant (IWTP) to TWA reclaimed water system. The conditions of the discharge are regulated under the FDEP domestic wastewater permit for TWA-South Bermuda wastewater treatment plant. SVC employs approximately 220 full time employees and operates 24 hours a day, seven days a week, approximately 300 days per year, in four shifts that work twelve hour increments. The facility has been at this location since 1977. The facility notified as a Small Quantity Generator of hazardous waste in 1995.

On April 22, 2008 Michael Eckoff and Janine Kraemer, FDEP, accompanied by Scott Cone, SVC, sampled three 55-gallon drums of battery wash wastewater, the battery washing unit reservoir, the catch basin in the battery storage area, and a tote of battery storage area wash wastewater at the SVC facility. Mr. Cone requested a notification form in order to update corporate and facility names.

**NOTE:** A notification form was emailed to Mr. Cone on April 22, 2008.

10. Inspection History

The facility was inspected by the Department's Hazardous Waste Program on December 2, 1998 and was in compliance at that time.

11. Process Description

SVC manufactures and bottles Gatorade for distribution. The facility has two manufacturing lines: one for small bottles (Line 1) and one for large bottles (Line 2) which are operated similarly. Line 2 was added to the facility in 2005. Line 1 has been in operation since 1995. The bottles and ingredients are shipped to the facility. The bottles are washed then labeled, ingredients are batched then placed in bottles, and packaged for shipment.

12. Narrative

***Bottling Process***

Bottles are unpacked then run through a conveyor system and coded with ink. There are two conveyor systems for the coding of the bottles. The ink applicators are periodically cleaned at cleaning stations, one at each conveyor, consisting of metal trays, one having an approximately 5-gallon bottle under the tray to store the waste from cleaning the applicator (Figures 3 to 6). **The bottle was open and was not labeled.** Containers of hazardous waste at or near the point of generation must be marked with either the words "Hazardous Waste" or with other words that identify the contents and be maintained closed [40 CFR 262.34(c)(1)(ii) and 265.173]. The cleaning product is VideoJet Make-up Fluid which contains 2-butanone (MEK), ethanol, ethyl acetate, and methanol and has a flash point of -9°C. **Paper towels and gloves used to clean the applicators are disposed in the trash.** A waste determination must be performed on the used paper towels and used gloves [40 CFR 262.11]. The ink product is VideoJet Ink which contains 2-butanone (MEK), ethanol, nitrocellulose, chromium III, ethyl acetate, and isopropyl alcohol and has

a flash point of -9°C. The cleaning and ink products are stored in fire cabinets next to the cleaning stations (Figure 1). The facility has a Crystal Clean parts washer but was not using it (Figure 2).

**NOTE:** On April 15, 2008 Mr. Cone emailed pictures showing new containers that will be used at the cleaning stations. **The containers need to be labeled either "Hazardous Waste" or with other words identifying the contents.**

Bottles are labeled using a hot melt labeler in three labeling lines. The product used in labeling is a wax. The labeler is serviced every three to six months by draining the wax, allowing the drained wax to harden, cleaning the unit with paraffin wax, and adding new wax when complete. In addition, Zep Slide is also used to clean the equipment. The product contains odorless aliphatic naphtha and isoparaffinic solvent and has a flash point of 51.6°C.

After the bottles are labeled, they are washed in two lines: one using RO water and the other compressed air. The RO wash wastewater is directed, via floor trenches to two sumps, to the IWTP.

Product mixing is conducted in a separate room. Ingredients are batched per product specifications and tested for quality control.

After the product passes quality control it is placed in the bottles. The bottles are then packed in cardboard boxes, which are sealed and ink stamped. Sealing the boxes is a similar operation to placing the label on the bottle, a hot wax is used. The ink product is 5003 Black Ink.

The boxes are then palletized and placed in either one of the two storage warehouses on-site.

Yearly maintenance activities, and on an as needed basis, are conducted on electric motors located throughout the facility. Oil is removed from the motor and taken to the used oil drum, new oil is placed in the motor.

Throughout the facility are operator stations. At or near these stations are phones, fire cabinets, and emergency procedures plans. **The Contingency Plan did not contain all the required information. The operator station at the bottle labeling area did not have the emergency procedures plan.** The generator must post at plant phones the name and phone number of the emergency coordinator, the locations of fire extinguishers, spill control material, and, if present, fire alarm, and the telephone number of the fire department [40 CFR 262.34(d)(5)(ii)]. Certain personnel on the floor are equipped with hand-held radios. The facility performs emergency drills every three months. The fire cabinets contain various cleaners and greasers, some were found to be corrosive or ignitable.

Megafoam EZ and Megasan 7.5, used to clean the bottling equipment, are stored in secondary containment. The products are mixed to specification for washing equipment. The equipment wash wastewater is directed, via floor trenches, to two sumps, then to the IWTP. Megafoam EZ has a pH of 12.5 to 13.5 Standard Units (SU) prior to mixing. At the time of the inspection liquid was present in the secondary containment. **Mr. Cone stated the liquid is pumped to the IWTP without checking the pH. A waste determination must be performed on the liquid [40 CFR 262.11].**

### **Machine Shop**

The facility machines stainless steel and plastic. Equipment includes a lathe and drill presses. Waste oil from the lathe is placed in the used oil drum. **Waste metal shavings are placed in the**

**trash (Figure 8).** A waste determination must be performed on the waste metal shavings [40 CFR 262.11]. Welding is also performed in the machine shop.

A Crystal Clean parts washer, serviced by Heritage (Figure 10) contains Crystal Clean Premium 142+ Mineral Spirits. The product contains aliphatic petroleum distillates and has a flash point of >142°F.

Misty Industrial Cleaning Solvent, used for cleaning, contains perchloroethylene and acetone. **Paper towels containing Misty Industrial Cleaning Solvent are disposed in the trash (Figures 8, 13, and 14).** A waste determination must be performed on the used paper towels [40 CFR 262.11].

A cart containing various fittings and parts is used as a training tool (Figure 12). Employees are evaluated on their ability to properly maintain the equipment and fittings. Oil used during the training on the equipment, drains to an approximately 5-gallon container below the cart (Figure 11). **The container was not labeled as used oil.** Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil" [40 CFR 279.22(c)(1) and 62-710.401(6), Florida Administrative Code (F.A.C.)].

An approximately 15-gallon container was storing used aerosol cans (Figures 15 and 16). **The container was not labeled and not marked with an accumulation start date.** Each container must be labeled or marked clearly with the words, "Hazardous Waste". The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container [40 CFR 262.34(a)(2) and (3)].

### **Battery Storage**

Forklift batteries are stored, recharged, and washed in this area. The area is contained by three walls with a curb at the entrance. The area contains two shelving units, three shelves high, where battery packs are stored and charged (Figure 31). A mobile unit between the shelves is used to move the battery packs. A washing unit located in the back of the area is used to wash batteries (Figures 27 and 28). The batteries are washed with water and a neutralizing solution. The neutralizing solution contains non-hazardous constituents.

David Ambrose, Warehouse Coordinator, stated the entire area and all the batteries in the forklifts are washed with water once a month. This washing process generates six 55-gallon drums of battery wash wastewater. The area is designed to direct the wash wastewater to a catch basin where the wash wastewater is then pumped into drums (Figures 29 to 31). Mr. Ambrose also stated that individual battery packs are washed in the washing unit approximately two to three times a month.

Batteries are serviced by Allen Energy. Light service is performed on-site: injectors or cable replacements. Any major service is performed at Allen Energy's facility.

**NOTE:** On April 17, 2008, Mr. Cone stated, via a telephone call that the wash wastewater from the washing unit is filtered, run through a deionizer, and reused. Occasionally, the wash wastewater is released from the unit and enters a catch basin, it is then pumped into drums. **A waste determination must be performed on the filters and sludge from the washing unit prior to disposal.** Mr. Cone was informed by the inspector that the Department would be sampling the battery wash wastewater from the washing unit, room wash, and from the fifteen drums on April 22<sup>nd</sup>. He stated that workers had begun to dispose of the battery wash wastewater into the IWTP. He also stated only four of the drums remained on site. Dennise Judy, FDEP Program Manager

Domestic Wastewater Permitting, was consulted on April 21, 2008 regarding the discharge from the IWTP to TWA reclaimed water system. Ms. Judy stated the battery wash wastewater stream was not part of the initial permitted discharges allowed to the IWTP. In addition, Scott Fick, TWA Environmental Specialist, was consulted that same day and he too was not aware of a permitted discharge of battery wash wastewater to the IWTP.

During the April 22<sup>nd</sup> sampling inspection, Mr. Cone was notified that the battery wash wastewater and the liquid from the secondary containment of the cleaning solutions was not authorized to be placed into the IWTP. Mr. Cone was advised to contact TWA to discuss discharges allowed into the IWTP.

**NOTE:** On May 19, 2008 Mr. Cone stated, via a telephone call, that the facility has contracted with a company to perform dry washing of the forklift batteries. The facility will not wash batteries with water anymore.

### **180-day Accumulation Area**

The waste storage area is located inside next to the machine shop. At the time of the April 11<sup>th</sup> inspection, there were fifteen 55-gallon drums of battery wash wastewater in the waste storage area (Figures 17 to 19). The drums were not labeled. Mr. Cone stated there were so many drums because the facility was preparing for a quality control audit and had conducted extra cleaning. He stated that normal operations generate six drums and that a waste determination had been performed and determined to be non-hazardous. Current procedure is to dispose of the battery wash wastewater in the IWTP.

The waste storage area contained a labeled 55-gallon drum of waste ink (Figures 22, 23, and 25) **with an accumulation start date of April 26, 2007, exceeding the SQG allowable hazardous waste storage time of 180 days.** A generator who accumulates hazardous waste on-site for greater than 180 days is an operator of a storage facility and is subject to the permitting requirements of 40 CFR Parts 264 and 265 and the permit requirements of 40 CFR Part 270 [40 CFR 262.34(f)].

The waste storage area contained a labeled 55-gallon drum of used oil (Figures 22 and 24) as well as labeled containers of waste mercury containing bulbs (Figure 17). **One container of mercury containing bulbs was open.** Containers of spent mercury lamps must remain closed [40 CFR 273.13(d)(1) and 62-737.400(5), F.A.C.]. A spill kit was available for use (Figure 20).

### 13. Record Review

**Disposal records, weekly inspections, waste determination for the battery wash wastewater, and maintenance records were not available at the time of the inspection. Mr. Cone indicated that Laura Woolford, Plant Buyer/Storeroom Resource, was the only person who could locate the records and was out on medical leave. Mr. Cone stated he would get the required records by April 14, 2008.**

**Manifests were not available for review.** A generator must keep a copy of each manifest for three years, after receiving a signed copy from the designated facility which received the waste, from the date the waste was accepted by the initial transporter [40 CFR 262.40(a)].

**NOTE:** On April 15, 2008 Mr. Cone emailed manifests. The manifests had a fax date stamp of April 14, 2008 from Giant Resource Recovery, final destination facility, in South Carolina. **The manifests were not completed correctly. The required hazardous waste codes were not indicated to include methyl ethyl ketone from the VideoJet Make-up Fluid and the VideoJet**

**Ink.** The manifest should have included the following waste codes: D035 and F005. A generator who transports, or offers for transport a hazardous waste for off-site treatment, storage, or disposal, or a treatment, storage, and disposal facility who offers for transport a rejected hazardous waste load, must prepare a Manifest on EPA Form 8700-22 according to the instructions [40 CFR 262.20(a)(1)].

**Used oil and waste mercury containing bulbs disposal records were not available for review.** A waste determination must be performed on the used oil and waste mercury containing bulbs [40 CFR 262.11].

**NOTE:** On April 15, 2008 Mr. Cone emailed, a spreadsheet created by SVC indicating waste disposal dates. Mr. Cone was contacted and instructed that the spreadsheet was not sufficient and disposal receipts were required from the hauler. On April 15, 2008 Mr. Cone emailed a SVC receiving ticket, payment to Heritage, indicating used oil disposed. The receiving ticket is not sufficient and a receipt from the hauler was requested. FDEP requested the used oil receipts from the hauler on April 18, 2008. As of the date of this Warning Letter the Department has not received the records.

**Weekly inspection records of the 180-day accumulation area did not contain all the required information.** Generators of hazardous waste who accumulate hazardous waste on-site under 40 CFR 262.34, shall maintain written documentation of the inspections required under 40 CFR Part 265. The generator shall keep the written documentation of the inspections under this section for at least three years from the date of the inspection. At a minimum, this documentation shall include the date and time of the inspection, the legibly printed name of the inspector, the number of containers, the condition of the containers, a notation of the observations made, and the date and nature of any repairs or other remedial actions [62-730.160(6), F.A.C. and 40 CFR 265.174]. Records indicate George M. conducts weekly inspections.

**NOTE:** On April 22, 2008 an example of a weekly inspection log was emailed to Mr. Cone.

Hazardous waste training documentation was reviewed for Fred Ireland, Steve Jusino, Ray Willis, Laura Woolford, and Russell Dover. **Hazardous waste training documentation was not available for Scott Cone, Brian Tomkins, and George M.** The generator must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures [40 CFR 262.34(d)(5)(iii)].

**Waste analysis records were not available for the battery wash wastewater.**

**NOTE:** On April 15, 2008 Mr. Cone emailed a laboratory report, which included TCLP results for battery wash. The laboratory report had a fax date stamp of April 11, 2008 from PepsiCo Gatorade-IND in Indiana. The laboratory report does not indicate the sample is from the SVC facility in Kissimmee FL. A waste determination must be performed on the battery wash wastewater from the washing unit and the room wash [40 CFR 262.11].

**ADDITIONAL NOTE:** During the April 22<sup>nd</sup> sampling inspection, Mr. Cone stated the results were from the Indiana facility. Mr. Cone was informed that a waste analysis from another facility could not be used to characterize a waste generated at the Kissimmee plant.

#### 14. Sample Results

Results from the April 22, 2008 sampling event are as follows:

Barium, cadmium, lead, and selenium results were all below TCLP hazardous waste levels. Chromium results were as follows:

<u>Sampling location</u>	<u>Result</u>
Catch basin and tote	3.1 milligram per liter (mg/L)
Drum #1	11.4A mg/L*
<b>Drum #2</b>	<b>17.3 mg/L</b>
Drum #4	4.3 mg/L
Washing unit reservoir	1.2 milligram per kilogram (mg/Kg)

\*"A" qualifier – value reported is the mean of two or more determinations. Due to the qualifier for Drum #1, the Department is requiring the drum be sampled again for a proper waste determination. Drum #2 is toxic for chromium and must be disposed as hazardous waste.

According to Mr. Cone, the contents of the drums were from the washing of the battery storage area. The Department is requiring SVC to locate the source of the chromium contamination.

15. Area of Concern

A container of ink applicator cleaning waste was open. The facility obtained new containers for storage of ink applicator cleaning waste. SVC must ensure that containers of hazardous waste are kept closed at all times except when adding or removing waste.

16. Summary of Potential Noncompliance Items and Recommended Corrective Actions

a. Regulation: 40 CFR 262.11

A person who generates a solid waste must determine if that waste is a hazardous waste. Specifically, SVC failed to conduct waste determinations on used paper towels, used gloves, liquid in the secondary containment, waste metal shavings, battery wash wastewater from both the room washing and the individual washing unit, used oil, and waste mercury containing bulbs.

Corrective Action: SVC must conduct waste determinations on all waste streams specifically identified above. Provide results of the waste determinations to the Department within 30 days of your receipt of this Warning Letter. If any of the wastes are known to be hazardous waste, please indicate this and, when available, please provide a copy of the hazardous waste manifest and land disposal restriction forms documenting removal of these wastes from the property.

b. Regulation: 40 CFR 262.20(a)(1)

A generator who transports, or offers for transport a hazardous waste for off-site treatment, storage, or disposal, or a treatment, storage, and disposal facility who offers for transport a rejected hazardous waste load, must prepare a Manifest on EPA Form 8700-22 according to the instructions. Specifically, SVC failed to list hazardous waste codes correctly on the manifests.

Corrective Action: SVC must prepare manifests correctly as specified in the instructions. Provide documentation that hazardous waste will be listed with the proper hazardous waste codes on all manifests to the Department within 30 days of your receipt of this Warning Letter. In addition, within 30 days of receipt of this Warning Letter, SVC shall submit to the Department written notification that all employees involved with hazardous waste

management and/or practices have been instructed in proper hazardous waste manifest preparation requirements.

c. Regulation: 40 CFR 262.34(a)(2) and (3)

The date upon which each period of accumulation begins must be clearly marked and visible for inspection on each container. Each container must be labeled or marked clearly with the words, "Hazardous Waste". Specifically, SVC failed to clearly mark each container with the date that accumulation begins and to label or clearly mark with the words, "Hazardous Waste" for the container of waste aerosol cans.

Corrective Action: SVC must clearly mark all hazardous waste containers with the date that accumulation begins and label or clearly mark each container with the words, "Hazardous Waste." Provide documentation that the container has been properly marked and labeled to the Department within 30 days of your receipt of this Warning Letter. In addition, within 30 days of receipt of this Warning Letter, SVC shall submit to the Department written notification that all employees involved with hazardous waste management and/or practices have been instructed in proper hazardous waste storage container management.

d. Regulation: 40 CFR 262.34(c)(1)(ii)

Containers of hazardous waste at or near the point of generation must be marked with either the words "Hazardous Waste" or with other words that identify the contents. Specifically, SVC failed to label the container of ink applicator cleaning waste with either the words "Hazardous Waste" or with other words that identify the contents.

Corrective Action: SVC must label containers of hazardous waste at or near the point of generation with either the words "Hazardous Waste" or with other words that identify the contents. Provide documentation that the container has been properly labeled to the Department within 30 days of your receipt of this Warning Letter.

e. Regulation: 40 CFR 262.34(d)(5)(ii)

The generator must post at phones the name and telephone number of the emergency coordinator, location of fire extinguishers and spill control material, and, if present, fire alarm, and the telephone number of the fire department. Specifically, SVC failed to post at phones the name and telephone number of the emergency coordinator, location of fire extinguishers and spill control material, and, if present, fire alarm, and the telephone number of the fire department.

Corrective Action: SVC must post at phones the name and telephone number of the emergency coordinator, location of fire extinguishers and spill control material, and, if present, fire alarm, and the telephone number of the fire department. Provide documentation of required information posted at phones to the Department within 30 days of your receipt of this Warning Letter.

f. Regulation: 40 CFR 262.34(d)(5)(iii)

The generator must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. Specifically, SVC failed to ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures.

Corrective Action: SVC must ensure that all employees who handle hazardous waste are thoroughly familiar with proper waste handling and emergency procedures. Provide documentation of training scheduled for all employees to the Department within 30 days of

your receipt of this Warning Letter. When training is complete, provide documentation within 30 days of completion.

g. Regulation: 40 CFR 262.34(f)

A generator who accumulates hazardous waste on-site for greater than 180 days is an operator of a storage facility and is subject to the permitting requirements of 40 CFR Parts 264 and 265 and the permit requirements of 40 CFR Part 270. Specifically, SVC failed to ship hazardous waste within 180 days of accumulating such waste.

Corrective Action: SVC must ensure hazardous waste is not accumulated on-site for more than 180 days or in quantities greater than 6,000 kilograms. Provide documentation of facility operational changes to ensure hazardous waste is shipped for proper disposal within 180 days of accumulating such waste to the Department within 30 days of your receipt of this Warning Letter.

h. Regulation: 40 CFR 262.40(a)

A generator must keep a copy of each manifest for three years, after receiving a signed copy from the designated facility which received the waste, from the date the waste was accepted by the initial transporter. Specifically, SVC failed to keep a copy of each manifest for three years.

Corrective Action: SVC must keep a copy of each manifest for three years, after receiving a signed copy from the designated facility which received the waste, from the date the waste was accepted by the initial transporter. Provide documentation that this requirement is being fulfilled to the Department within 30 days of your receipt of this Warning Letter.

i. Regulation: 40 CFR 265.174 and 62-730.160(6), F.A.C.

Generators of hazardous waste who accumulate hazardous waste on-site under 40 CFR 262.34, shall maintain written documentation of the inspections required under 40 CFR Part 265. The generator shall keep the written documentation of the inspections under this section for at least three years from the date of the inspection. At a minimum, this documentation shall include the date and time of the inspection, the legibly printed name of the inspector, the number of containers, the condition of the containers, a notation of the observations made, and the date and nature of any repairs or other remedial actions. Specifically, SVC failed to document all the required information on the weekly inspection form.

Corrective Action: SVC must document weekly inspections with all the required information. Provide documentation of a written facility inspection plan including the schedules and logs mentioned above, as well as completed logs, if any, to the Department within 30 days of your receipt of this Warning Letter

j. Regulation: 40 CFR 273.13(d)(1) and 62-737.400(5), F.A.C.

Containers of spent mercury lamps must remain closed. Specifically, SVC failed to keep closed containers of spent mercury lamps.

Corrective Action: SVC must keep closed containers of spent mercury lamps. Provide documentation of the containers closed to the Department within 30 days of your receipt of this Warning Letter.

k. Regulation: 40 CFR 279.22(c)(1) and 62-710.401(6), (F.A.C.)

Containers and aboveground tanks used to store used oil at generator facilities must be labeled or marked clearly with the words "Used Oil." Specifically, SVC failed to label the used oil container on the training cart with the words "Used Oil."

Corrective Action: SVC must label the container of used oil on the training cart with the words "Used Oil." Provide documentation of the container labeled to the Department within 30 days of your receipt of this Warning Letter.

16. Conclusion

SVC is a Small Quantity Generator (SQG) of hazardous waste, a generator of used oil, and a small quantity handler of universal waste and was not in compliance at the time of this inspection.

55627.pdf,

Lani,

After researching our database, I've located this incident for this request. Due to the age of this incident and our four-year retention schedule this is the only remaining information on this incident. OER considers this incident closed. Please feel free to contact me if you have any questions.

Thanks,

**Shane Gibbs**  
**Government Operations Consultant**  
**Office of Emergency Response**  
**850-245-2872 Ext. 52872**

Good afternoon,

Do you have any records pertaining to the following spill?

Incident #55627

Spill at train tracks near 6525 Osceola Polk Line Road, Davenport.

Thank you!

**Lani A. Frith**

<p><b>Incident Narrative:</b></p> <p>On March 28, 2016 at 21:25, Responder Hall received State Watch Office notification 2016-2514 regarding discharge of 2 gallons of lubricating oil from a locomotive in Davenport. The release was reportedly located on the tracks near 6525 Osceola Polk Line Road.</p> <p>I contacted CSX and spoke with Jason (904-279-7027) who indicated 2-5 gallons of lubricating oil in a sump had mixed with several thousand gallons of rainwater. During heavy rains the sump overflowed, releasing an estimated 2,100 gallons of oil/water mix to the ground surface at the indicated location.</p> <p>On March 29, 2016, SWS and Arcadis Engineering conducted site remediation activities at the incident location. An ISRR was completed by Arcadis and submitted May 3, 2016.</p> <p>The ISRR was reviewed 1/6/17 and deemed sufficient to close the case. All sampled parameters were below lab detection limits excluding benzo(a)pyrene and benzo(b)fluoranthene, which were detected between the MDL and PQL. This is deemed sufficient to issue a No Further Action Letter.</p> <p>No further action is required of OER; this case may be closed.</p>
