

Project Description

The Florida Department of Transportation (FDOT) is proposing improvements to U.S. 301 (State Road (S.R.) 35) from south of S.R. 44 to the Marion County line in Sumter County. The total project length is approximately 8 miles.

The purpose of this project is to restore the functional condition of the pavement along the roadway. Improvements will provide a smoother driving surface and enhance safety by updating pavement markings and signs.

This maintenance and resurfacing project will update existing pedestrian curb ramps as needed to comply with Americans with Disabilities Act (ADA) standards. Additional improvements are proposed to address detectable warning requirements, roadway signing and pavement markings, reestablishing school zones, and updating existing railroad crossing signing and markings to current standards.
