Project Location

S.R. 472

Begin:
west of Minnesota Avenue
End:
east of Minnesota Avenue

FDOT is proposing improvements along SR 472 from west of Minnesota Avenue to east of Minnesota Avenue in DeLand.

All improvements will be constructed within the existing FDOT right of way.

Proposed Improvements

The proposed improvements along S.R. 472 include constructing a directional median at the Minnesota Avenue intersection and adding a new westbound right turn lane.

Additionally, approximately 2,150 feet west of Minnesota Avenue a new U-turn opening will be provided with accommodations for large trucks.

The project will also include repaving within the work area, drainage improvements, and striping and signage updates. The addition of lighting is currently being evaluated for the project.

Enhancing Safety Through Access Management

Conflict points = Places where two vehicles can cross paths and potentially collide

Fewer conflicts mean fewer severe crashes

The purpose of these improvements is to enhance safety. Safety can be enhanced through access management by limiting the number of conflict points at a given intersection.

Conflict points are places where two vehicles could cross paths and potentially collide.

At a full median opening along a two-lane roadway, there are as many as 18 conflict points. Each conflict point is a location where a crash can occur.

Adjusting the median opening to a two-way directional median reduces conflict points to four because vehicles turning onto Minnesota Avenue will be required to turn right. Reducing conflict points helps decrease the frequency and severity of crashes, thus increasing safety for motorists.

Schedule and Estimated Construction Cost

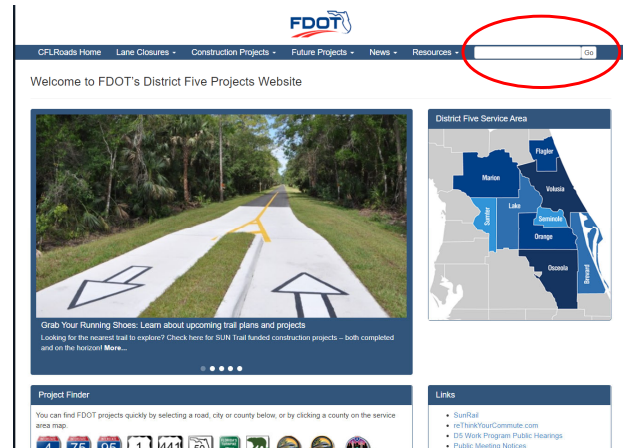

Design plans are expected to be completed in spring 2022 and construction is funded for late 2022. The cost for construction is estimated at seven hundred thousand dollars.
