

S.R. A1A Corridor Improvements from Long Point Road to George King Boulevard

Brevard County

Financial Project Identification (FPID) No.: 430202-8

Project Description

The Florida Department of Transportation (FDOT) is proposing improvements along State Road (S.R.) A1A from Long Point Road to George King Boulevard in Cape Canaveral to enhance safety for vehicles, pedestrians, and bicyclists.

To achieve these goals, FDOT is considering reconstructing the project corridor. The proposed roadway configuration includes two travel lanes in each direction separated by a raised center median and introduces a new bicycle track separated from the travel lanes. The preferred concept also proposes pedestrian safety improvements such as upgraded sidewalk throughout the corridor, new and upgraded crosswalks, signalized mid-block pedestrian crossings, and upgraded pedestrian signals.

This Complete Streets concept incorporates safe travel space for all users. Other improvements include upgrading traffic signals, adding landscaping to help encourage slower speeds, and drainage improvements.

This project is in the very early design phase. Additional right of way will be needed.

FDOT has been coordinating closely with city officials and the Space Coast Transportation Planning Organization on this project.

An adjacent project (430202-5) proposes to realign International Drive to meet S.R. A1A at North Atlantic Avenue and construct a roundabout at the new intersection. Please see that project handout for more information.

Project Status and Estimated Costs*

Design:	Ongoing—completion summer 2023	\$ 588,000
Right of Way:	Unfunded	
Construction:	Unfunded	

* subject to change
